QUESTION 1

You have an item that uses a storage dimension group. Primary stocking is disabled for the group. Item reservations for sales orders are automatic.

You create a new sales order for the item.

You need to select a specific batch number for the item.

What should you do?

- A. Disable automatic reservation on the sales order, and then change the batch number in the Reservation form
- B. Disable automatic reservation on the sales order, and then lock the batch number in the Reservation form.
- C. Use the Reservation form to select the batch number, and then place the order on hold.
- D. Use the Reservation form to select the batch number, and then lock the reservation.

Correct Answer: D

Example

A customer calls with a request concerning a load of bricks that they have ordered from your company. The customer wants to make sure that the bricks are reserved from the same batch as the previous load that they received. When checking, you observe that the bricks are reserved automatically with no batch number specified on the sales order line so you need to make sure that the reserved quantity has the correct batch number and that the reservation is locked with this batch number.

1.

Select the sales order of the ordered brick load in the Sales order form and open the Reservation form.

2.

Apply one of the following methods depending on whether the bricks have been automatically reserved with the correct batch number or not. If the batch number is correct, you just need to lock the batch number reservation to ensure that the batch number is not changed by an automated process. To lock the batch number, do the following:

a.

Select the reservation in the Reservation form.

b.

Click Inventory > Dimensions display.

c.

Select the Batch number check box, and click OK.

d.

Select the Batch number check box under Lock reservations.

3. To change the batch number dimension of the reservation, do the following:

- a. Click Inventory > Dimensions display, select the Batch number check box, and click OK.
 - b. Select the existing reservation in the Reservation form, and change the quantity in the Reservation field to zero to cancel this reservation line.
 - c. Select the line with the batch number dimension that the customer requested and enter the quantity in the Reservation field.
-

QUESTION 2

You need to create a new automatic charge.

You open the Auto charges form and you create a new line.

Which field requires a value?

- A. Charges code
- B. Item charge group
- C. Charges value
- D. Vendor charges group

Correct Answer: A

Field: Charges code

Select one of the charges that are defined in the Charges code form.

incorrect

Not B, not D: No fields Item charge group or Vendor charges group.

QUESTION 3

You have a bill of materials (BOM) item.

Ten percent of one of the BOM components is wasted during the manufacturing process.

You need to ensure that the cost calculation for the BOM item is accurate.

What should you do?

- A. Set the Variable scrap field on the component BOM line to 10.
- B. Set the Constant scrap field on the component BOM line to 10.
- C. Set the Consumption is field on the component BOM line to variable.
- D. Set the Consumption is field on the component BOM line to constant.

Correct Answer: B

Specify constant scrap when you know, or have calculated, that a quantity of bill of materials (BOM) items will be lost or rejected during production. For example, you can apply constant scrap to the setup of a machine if you know that material will be always be wasted before a usable product is produced.

QUESTION 4

You plan to report a bill of materials (BOM) as finished.

You need to ensure that when you report the BOM as finished, the following occurs:

Component items from the BOM are reported as finished.

Component items from the sub-BOMs that are currently on-hand are reported as finished.

What should you set?

- A. The Reservation field to Automatic
- B. The Explosion option to Always
- C. The Explosion option to Shortage
- D. The Reservation field to Explosion

Correct Answer: C

The "explosion" parameter defines how AX will consume the on hand inventory of the components.

*

Shortage: Sub BOMs are only exploded if there is insufficient on hand inventory. If there is a partial quantity of the Sub BOM available, AX will only explode the component quantities of the Sub BOM, for the difference.

*

Never: The Sub BOM is never exploded if there is a component shortage

*

Always: The Sub BOM is always exploded, and any free on hand inventory of the Sub BOM is never consumed

QUESTION 5

You need to identify what can be done from the Arrival overview form.

What should you identify?

- A. Estimating and managing item arrival alerts
- B. Viewing expected receipts and starting the receipt process
- C. Registering items that are delivered to a transfer warehouse

D. Checking that ordered items arrived physically in a quarantine warehouse

Correct Answer: B

Arrival overview (form) [AX 2012]

Use this form to list items that are expected in the inbound dock. As soon as the expected items have arrived, you can start the arrival process from this form.

Command include:

*

Start arrival

Register that the selected receipts have arrived, and create an item-arrival journal

*

Select all

Select the Select for arrival for all receipts. This option is used if all receipts should be registered as having arrived.

*

Show all selected

Filter the list of receipts so that only those that have the Select for arrival option selected are displayed.
