QUESTION 1

You need to add a field to a table that will store a value for a product price that contains a decimal. For example, a price can be 19.99. Which type of field should be added to the table?

- A. a decimal
- B. a real
- C. a double
- D. an integer

Correct Answer: C

QUESTION 2

A table named VendTable contains a field named MainContactWorker. which is the reference Recid. Many records in VendTable have the same value for MainContactWorker. Users frequently search for data in VendTable based on the MainContactWorker field.

You need to ensure that when users make Queries that include the MainContactWorker field in the where clause, the query results are returned in the least amount of time possible.

What should you create on VendTable?

- A. a Surrogate Key that is used as the primary index
- B. a unique index on MainContactWorker
- C. a non-unique index on MainContactWorker
- D. a primary index on MainContactWorker

Correct Answer: C

QUESTION 3

You need to configure a Microsoft Dynamics AX development environment on the cloud for your customer. Which service should you use to deploy on Microsoft Azure?

- A. Microsoft Office 365 service
- B. Microsoft Azure SQL service
- C. Microsoft Azure Active Directory service
- D. Microsoft Dynamics Lifecycle Service

Correct Answer: A

QUESTION 4

You are developing a form that allows users to update an order status. You create a table named Table1 that you will use as a data source for this form.

You want to include a radio-button style selection so that the end user can choose between three different order statuses: "Canceled", "Delivered", "Processing".

What should you add to Table1 so that you can add the radio button selection to the form?

- A. three different string fields that represent each order status
- B. three different Extended Data Types (EDTs) of type string with each order status
- C. a Boolean data type with values that represent each choice
- D. a base enumeration with three elements that represent each order status

Correct Answer: A

QUESTION 5

You need to write an expression to calculate the compound interest that a bank needs. The formula for compound interest after one period is as follows: $I = (P * (1 + R)) - P$. Where I = Compound interest, P = Principal that was invested, R = Rate of interest after one period. Which X++ expression is equivalent to the formula above using operator precedence in X++?

- A. $I = P * 1 + R - P$
- B. $I = P * (1 + R - P)$
- C. $I = P * (1 + R) - P$
- D. $I = (P * 1) + (R - P)$

Correct Answer: C
