In the Database On Table Row operation, what does the Watermark column enable the On Table Row operation to do?

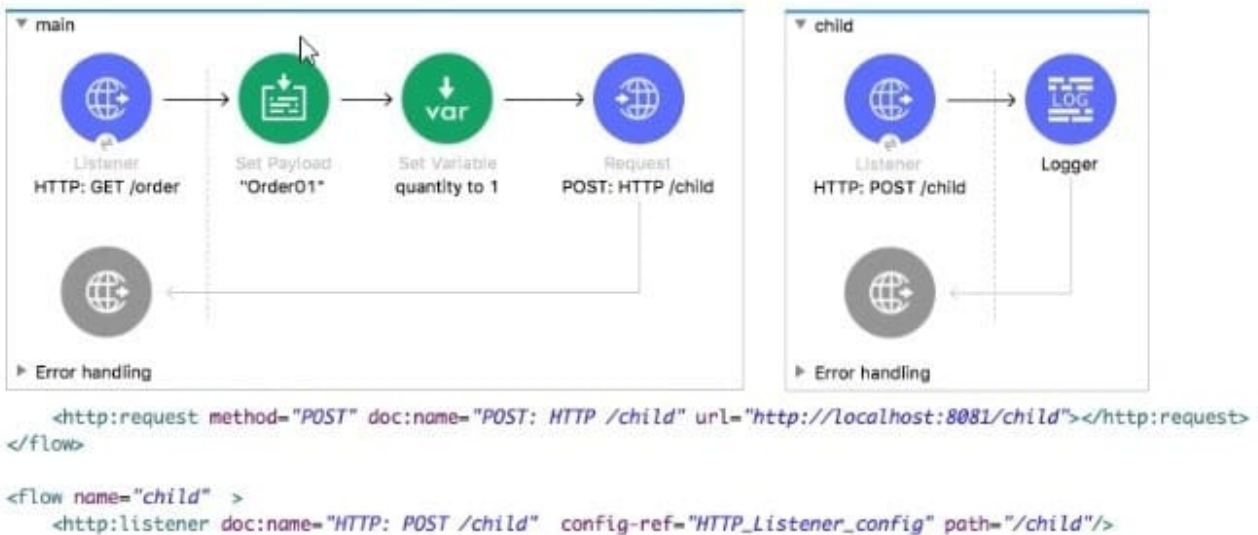

- A. To avoid duplicate processing of records in a database.
- B. To delete the most recent records retrieved from a database to enable database caching
- C. To enable duplicate processing of records in a database
- D. To save the most recent records retrieved from a database to enable database caching

Correct Answer: A

The correct answer is To avoid duplicate processing of records in a database.
