### QUESTION 1

Your network contains 500 computers that run Windows 11 and have Delivery Optimization enabled.

All the computers contain the following:

1.

Microsoft 365 apps

2.

A Microsoft Store app named App1

3.

A Windows 11 driver named Driver1

What can use Delivery Optimization to download updates?

A. Driver1 only

B. Microsoft 365 apps only

C. Microsoft 365 apps and Driver1 only

D. Microsoft 365 apps, Driver1, and App1

Correct Answer: D

Types of download content supported by Delivery Optimization

\*

(Driver1) Windows Update (feature updates quality updates, language packs, drivers)

\*

(app1) Windows 10 Store files

\*

Microsoft 365 Apps and updates

\*

Etc.

---

### QUESTION 2

You sign in to a computer that runs Windows 10 Pro.

You need to ensure that after a restart, the computer starts automatically in Safe Mode with Networking.

What should you use to configure the restart options?

- A. bootcfg
- B. BCDEdit
- C. Windows System Image Manager (Windows SIM)
- D. bootrec

Correct Answer: B

Reference: <https://www.lifewire.com/how-to-force-windows-to-restart-in-safe-mode-2625163>

### QUESTION 3

You have computers that run Windows 11 as shown in the following table.

Name	IP address	Joined to
Computer1	192.168.10.10	Active Directory
Computer2	192.168.10.15	Workgroup

You ping 192.168.10.15 from Computer1 and discover that the request timed out.

You need to ensure that you can successfully ping 192.168.10.15 from Computer1.

Solution: On Computer2, you share a folder.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Instead Solution: On Computer2, you allow incoming ICMPv6 traffic in Windows Defender Firewall.

Note: Create an Inbound ICMP Rule

To allow inbound Internet Control Message Protocol (ICMP) network traffic, use the Windows Defender Firewall with Advanced Security node in the Group Policy Management MMC snap-in to create firewall rules. This type of rule allows

ICMP requests and responses to be sent and received by computers on the network.

Note: To create an inbound ICMP rule (see step 6 below).

Open the Group Policy Management Console to Windows Defender Firewall with Advanced Security.

In the navigation pane, click Inbound Rules.

Click Action, and then click New rule.

On the Rule Type page of the New Inbound Rule Wizard, click Custom, and then click Next.

On the Program page, click All programs, and then click Next.

On the Protocol and Ports page, select ICMPv4 or ICMPv6 from the Protocol type list. If you use both IPv4 and IPv6 on your network, you must create a separate ICMP rule for each.

Etc.

<https://learn.microsoft.com/en-us/windows/security/threat-protection/windows-firewall/create-an-inbound-icmp-rule>

#### QUESTION 4

##### HOTSPOT

Which Windows 10 computers can you ping successfully from Computer1 and Computer2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Computer1:

Computer2 only
Computer3 only
Computer2 and Computer3
No Windows 10 computers

Computer2:

Computer1 only
Computer3 only
Computer1 and Computer3
No Windows 10 computers

Correct Answer:

Computer1:

	▼
Computer2 only	
Computer3 only	
Computer2 and Computer3	
No Windows 10 computers	

Computer2:

	▼
Computer1 only	
Computer3 only	
Computer1 and Computer3	
No Windows 10 computers	

Box 1: Computer3 only.

Computer1 and Computer2 are domain joined so both will be using the Domain profile. The firewall rules on Computer1 allow outbound ICMP on all profiles so outbound ICMP will be allowed on the Domain profile.

The firewall rules on Computer2 allow inbound ICMP on the Public profile only, so it will be blocked on the domain profile. Therefore, Computer2 cannot be pinged.

The firewall rules on Computer3 allow inbound ICMP on all profiles. Therefore, Computer3 will not block the inbound pings.

Box 2: No Windows 10 computers.

The firewall rules on Computer2 allow outbound ICMP on the Private profile only, so it will be blocked on the domain profile. Therefore, Computer2 cannot ping any computers.

## QUESTION 5

You manage devices that run Windows 10.

Ten sales users will travel to a location that has limited bandwidth that is expensive. The sales users will be at the location for three weeks.

You need to prevent all Windows updates from downloading for the duration of the trip. The solution must not prevent access to email and the Internet.

What should you do?

A. From Network and Internet in the Settings app, set a data limit.

- B. From Accounts in the Settings app, turn off Sync settings.
- C. From Network and Internet in the Settings app, set the network connections as metered connections.
- D. From Update and Security in the Settings app, pause updates.

Correct Answer: D
