QUESTION 1

You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. The tenant includes a user named User1.

You enable Azure AD Identity Protection.

You need to ensure that User1 can review the list in Azure AD Identity Protection of users flagged for risk. The solution must use the principle of least privilege.

To which role should you add User1?

- A. Security reader
- B. Service administrator
- C. Compliance administrator
- D. Global administrator

Correct Answer: A

Security Reader Users with this role have global read-only access on security-related feature, including all information in Microsoft 365 security center, Azure Active Directory, Identity Protection, Privileged Identity Management, as well as the ability to read Azure Active Directory sign-in reports and audit logs, and in Office 365 Security and Compliance Center.

In Identity Protection Center can read all security reports and settings information for security features:

1.

Anti-spam

2.

Encryption

3.

Data loss prevention

4.

Anti-malware

5.

Advanced threat protection

6.

Anti-phishing

7.

Mail flow rules Incorrect:

* Service administrator

Previously, this role was called "Service Administrator" in Azure portal and Microsoft 365 admin center. We have renamed it to "Service Support Administrator" to align with the existing name in Microsoft Graph API and Azure AD PowerShell.

Service Support Administrator

Users with this role can create and manage support requests with Microsoft for Azure and Microsoft 365 services, and view the service dashboard and message center in the Azure portal and Microsoft 365 admin center.

QUESTION 2

You have a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com.

A temporary employee at your company uses an email address of user1@outlook.com.

You need to ensure that the temporary employee can sign in to contoso.com by using the user1@outlook.com account.

What should you do?

- A. From the Azure Active Directory admin center, create a new user.
- B. From the Microsoft 365 admin center, create a new contact.
- C. From the Azure Active Directory admin center, create a new guest user.
- D. From the Microsoft 365 admin center, create a new user.

Correct Answer: C

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest

user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate

using that.

QUESTION 3

Your company has an Azure Active Directory (Azure AD) tenant named contoso.com that contains 10,000 users.

The company has a Microsoft 365 subscription.

You enable Azure Multi-Factor Authentication (MFA) for all the users in contoso.com.

You run the following query.

```
search "SigninLogs" | where ResultDescription == "User did not pass the MFA challenge."
```

The query returns blank results.

You need to ensure that the query returns the expected results.

What should you do?

- A. From the Azure Active Directory admin center, configure the diagnostics settings to archive logs to an Azure Storage account.
- B. From the Security and Compliance admin center, turn on auditing.
- C. From the Security and Compliance admin center, enable Office 365 Analytics.
- D. From the Azure Active Directory admin center, configure the diagnostics settings to send logs to an Azure Log Analytics workplace.

Correct Answer: D

You can now send audit logs to Azure Log Analytics. This gives you much easier reporting on audit events and the ability to perform queries such as the one in this question.

QUESTION 4

You have a Microsoft 365 E5 subscription that uses Microsoft Teams.

You need to provide Teams administrators with early access to Teams preview features.

What should you configure?

- A. Release preferences in the Microsoft 365 admin center
- B. Teams upgrade settings in the Microsoft Teams admin center
- C. Office installation options in the Microsoft 365 admin center
- D. Teams update policies in the Microsoft Teams admin center

Correct Answer: B

Get early access to new Teams features.

Join the Microsoft Teams public preview program to get early access to new features and share your feedback directly with the Teams team.

Switch to the Teams public preview

1.

Select Settings and more to the left of your profile picture at the top of Teams.

2.

Select About > Public preview.

3.

In the notice that appears, select Switch to public preview.

QUESTION 5

Your network contains an on-premises Active Directory domain named contoso.com.

You have a hybrid Microsoft 365 tenant that uses Microsoft Teams.

You need to ensure that audio, video, and screen sharing is prioritized over other data types across the network.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From Group Policy Management configure Policy-based QoS
- B. From the Microsoft Teams admin center, configure the Media bit rate (Kbs) setting.
- C. From the Microsoft Teams admin center, configure network sites.
- D. From the Microsoft Teams admin center, set Insert Quality of Service (QoS) markers for real-time media traffic to on
- E. From Group Policy Management, configures Background Intelligent Transfer Service (BITS).

Correct Answer: CD
