To migrate mailboxes from Outlook.com to Office 365, you need to use the IMAP migration method.

After you\'ve added your users to Office 365, you can use Internet Message Access Protocol (IMAP) to migrate email for those users from their IMAP-enabled email servers. In the Microsoft 365 admin center, go to Setup > Data migration to start migrating IMAP enabled emails. The email migrations page is pre-configured for migrations from Gmail, Outlook, Hotmail and Yahoo. You can also enter your own IMAP server name and connection parameters to migrate from an email service that is not listed.

The Azure AD Attributes page shows which attributes will be synchronized based on the Office 365 services you are using (Exchange, SharePoint etc). We can see that ExtenstionAttribute10 and ExtensionAttribute11 have been deselected.

The Directory Extensions page shows which additional attributes will be synchronized (additional to the list in the Azure AD Attributes page).

ExtensionAttribute1:

Will be synchronized because it is ticked in the Azure AD Attributes page.

ExtensionAttribute10.

Will be synchronized because although it is unticked in the Azure AD Attributes page, it is added again in the Directory Extensions page.

ExtensionAttribute11.

Will not be synchronized because it is unticked in the Azure AD Attributes page and it is not added again in the Directory Extensions page.

ExtensionAttribute12:

Will be synchronized because it is ticked in the Azure AD Attributes page. It is also added again in the Directory Extensions page but this will have no effect as it is already ticked in the Azure AD Attributes page.
