QUESTION 1

HOTSPOT

You are developing a Microsoft Teams tab.

You need to create a modal dialog to collect input from a user.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Create the dialog as: ▼
A bot
A .json manifest file
A webpage
An .xml file

Invoke the dialog from the Teams tab by using a JavaScript code of: ▼
<code>microsoftTeams.appInitialization.notifySuccess();</code>
<code>microsoftTeams.tasks.startTask(taskModuleInfo);</code>
<code>microsoftTeams.tasks.submitTask();</code>
<code>window.open("/dialog.html", "_blank");</code>

Correct Answer:

Create the dialog as: ▼

A bot

A .json manifest file

A webpage

An .xml file

Invoke the dialog from the Teams tab by using a JavaScript code of: ▼

```
microsoftTeams.appInitialization.notifySuccess();
```

```
microsoftTeams.tasks.startTask(taskModuleInfo);
```

```
microsoftTeams.tasks.submitTask();
```

```
window.open("/dialog.html", "_blank");
```

QUESTION 2

Your company has a Microsoft 365 subscription and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

An external vendor has a Microsoft account that has a username of user1@outlook.com.

You plan to provide user1@outlook.com with access to several resources in the subscription.

You need to add the external user account to contoso.onmicrosoft.com. The solution must ensure that the external vendor can authenticate by using user1@outlook.com.

What should you do?

- A. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify -UserPrincipalName user1@outlook.com.
- B. From the Microsoft 365 admin center, add a contact, and then specify user1@outlook.com as the email address.
- C. From the Azure portal, add a new guest user, and then specify user1@outlook.com as the email address.
- D. From the Azure portal, add a custom domain name, and then create a new Azure AD user and use user1@outlook.com as the username.

Correct Answer: C

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these

methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest

user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate

using that.

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

1.

Users must be able to authenticate during business hours only.

2.

Authentication requests must be processed successfully if a single server fails.

3.

When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.

4.

Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that contains a pass-through authentication model. You install an Authentication Agent on three servers and configure seamless SSO.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

This solution meets all the requirements:

1.

Users must be able to authenticate during business hours only. (This can be configured by using Logon Hours in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory)

2.

Authentication requests must be processed successfully if a single server fails. (We have Authentication Agents running on three servers)

3.

When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in. (This can be configured in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory)

4.

Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically. (This goal is met by seamless SSO)

QUESTION 4

Your company has two offices. The offices are located in Seattle and New York.

The company uses a third-party email system.

You implement Microsoft 365.

You move all the users in the Seattle office to Exchange Online. You configure Microsoft 365 to successfully receive all the email messages sent to the Seattle office users.

All the users in the New York office continue to use the third-party email system.

The users use the email domains shown in the following table.

Users in	Email domain
Seattle	Contoso.com
New York	Adatum.com

You need to ensure that all the email messages sent to the New York office users are delivered successfully. The solution must ensure that all the email messages for the users in both offices are routed through Microsoft 365.

You create the required DNS records and Send connectors.

What should you do next from Microsoft 365?

- A. From Microsoft 365 admin center, set the default domain. From the Exchange admin center, create a transport rule for all the email messages sent to adatum.com.
- B. From Microsoft 365 admin center, add the adatum.com domain. From the Exchange admin center, configure adatum.com as an internal relay domain.
- C. From Microsoft 365 admin center, add the adatum.com domain. From the Exchange admin center, configure adatum.com as an authoritative domain.
- D. From Microsoft 365 admin center, set the default domain. From the Exchange admin center, configure adatum.com as a remote domain.

Correct Answer: B

The first step is to configure Exchange Online to accept emails for the adatum.com domain. To do this, we add the domain in Microsoft 365. When you add your domain to Microsoft 365, it's called an accepted domain.

The next step is to tell Exchange Online what to do with those emails. You need to configure the adatum.com domain as either an authoritative domain or an internal relay domain.

Authoritative domain means that the mailboxes for that domain are hosted in Office 365. In this question, the mailboxes for the adatum.com domain are hosted on the third-party email system. Therefore, we need to configure the adatum.com

domain as an internal relay domain. For an internal relay domain, Exchange Online will receive the email for the adatum.com domain and then 'relay' (forward) the email on to the third-party email server.

QUESTION 5

You need to consider the underlined segment to establish whether it is accurate.

Your company user data is stored shares hosted by file servers located in their on-premises network.

You have been tasked with migrating the user data to a Microsoft 365 subscription. You want to make sure that the user data is imported into Microsoft OneDrive.

To achieve your goal, you should make use of the SharePoint Migration Tool.

Select adjustment required if the underlined segment is accurate. If the underlined segment is inaccurate, select the accurate option.

What should you include in the recommendation?

- A. No adjustment required.
- B. Office Deployment Tool (ODT).
- C. Run the SharePoint Hybrid Configuration Wizard.
- D. Windows Server Migration Tool.

Correct Answer: A
