QUESTION 1

DRAG DROP

You need to implement the role functionality for the backend web service calls.

Which three actions should you perform in sequence? To answer, move the actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

The screenshot shows a drag-and-drop interface with two main sections: "Actions" on the left and "Answer Area" on the right. The "Actions" section contains seven boxes with the following text:

- Upload a certificate for the application registration of the backend web service.
- Modify the manifest that defines the application roles and set Allowed Member Types to **Apps**.
- Modify the manifest that defines the application roles and set Allowed Member Types to **Users**.
- Create a new client secret in the application registration of the backend web service.
- Verify for the role claims in the backend web service.
- Assign the roles to the Azure AD group that contains the users who are mapped to the roles.

The "Answer Area" section has three empty slots, numbered 1, 2, and 3. Between the "Actions" and "Answer Area" sections are two circular arrows: a right-pointing arrow (>) and a left-pointing arrow (<). On the right side of the "Answer Area", there are two circular arrows: a right-pointing arrow (>) and a left-pointing arrow (<).

Correct Answer:

Actions

- Upload a certificate for the application registration of the backend web service.
- Modify the manifest that defines the application roles and set Allowed Member Types to **Apps**.
- Modify the manifest that defines the application roles and set Allowed Member Types to **Users**.

Answer Area

- 1 Create a new client secret in the application registration of the backend web service.
- 2 Verify for the role claims in the backend web service.
- 3 Assign the roles to the Azure AD group that contains the users who are mapped to the roles.

QUESTION 2

HOTSPOT

You need to recommend the development environment and tools for the development of SalesApp.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Development model: ▼

Office Add-ins
SharePoint Framework (SPFx) web parts
Microsoft Visual Studio Tools for Office (VSTO)

IDE: ▼

Script Lab
Microsoft Visual Studio
Microsoft Visual Studio Code

Front-end framework: ▼

Fluent UI
Bootstrap
Material Design

Correct Answer:

Development model: ▼

Office Add-ins
SharePoint Framework (SPFx) web parts
Microsoft Visual Studio Tools for Office (VSTO)

IDE: ▼

Script Lab
Microsoft Visual Studio
Microsoft Visual Studio Code

Front-end framework: ▼

Bootstrap
Material Design

QUESTION 3

You need to develop a client-side web app that will be registered with the Microsoft identity platform. Which type of authorization flow should you use?

- A. authorization code grant
- B. device code grant
- C. implicit grant
- D. client credentials grant

Correct Answer: A

QUESTION 4

You develop a web API named WebApi1.

When validating a token received from a client application, WebApi1 receives a `MsalUiRequiredException` exception from the Microsoft Identity Platform.

You need to ensure that the client application has the information required to complete the authentication.

Which header should you include in the HTTP response sent from WebApi1 to the client application?

- A. Accept
- B. Authorization
- C. WWW-Authenticate
- D. Access-Control-Allow-Credentials

Correct Answer: C

Reference: <https://docs.microsoft.com/en-us/dotnet/api/system.net.http.headers.httpresponseheaders.wwwauthenticate?view=net-5.0>

QUESTION 5

Which type of authentication flow should you recommend for the planned integration with Office 365?

- A. device code
- B. implicit grant
- C. authorization code
- D. client credentials

Correct Answer: C

To use Microsoft Graph to read and write resources on behalf of a user, your app must get an access token from the Microsoft identity platform and attach the token to requests that it sends to Microsoft Graph.

One common flow used by native and mobile apps and also by some Web apps is the OAuth 2.0 authorization code grant flow.

Scenario: Email the generated invoices to customers on behalf of the current signed-in user. Any emails generated by the system will contain the invoiced.

Use Azure AD to manage identities, authentication, and authorization.
