### QUESTION 1

An API implementation is deployed to CloudHub.

What conditions can be alerted on using the default Anypoint Platform functionality, where the alert conditions depend on the end-to-end request processing of the API implementation?

- A. When the API is invoked by an unrecognized API client
- B. When a particular API client invokes the API too often within a given time period
- C. When the response time of API invocations exceeds a threshold
- D. When the API receives a very high number of API invocations

Correct Answer: C

Reference: <https://docs.mulesoft.com/api-manager/2.x/using-api-alerts>

---

### QUESTION 2

What is true about where an API policy is defined in Anypoint Platform and how it is then applied to API instances?

- A. The API policy is defined in Runtime Manager as part of the API deployment to a Mule runtime, and then ONLY applied to the specific API instance.
- B. The API policy is defined in API Manager for a specific API instance, and then ONLY applied to the specific API instance.
- C. The API policy is defined in API Manager and then automatically applied to ALL API instances.
- D. The API policy is defined in API Manager, and then applied to ALL API instances in the specified environment.

Correct Answer: B

---

### QUESTION 3

An organization is implementing a Quote of the Day API that caches today's quote.

What scenario can use the CloudHub Object Store via the Object Store connector to persist the cache's state?

- A. When there are three CloudHub deployments of the API implementation to three separate CloudHub regions that must share the cache state.
- B. When there are two CloudHub deployments of the API implementation by two Anypoint Platform business groups to the same CloudHub region that must share the cache state.
- C. When there is one deployment of the API implementation to CloudHub and another deployment to a customer-hosted Mule runtime that must share the cache state.
- D. When there is one CloudHub deployment of the API implementation to three CloudHub workers that must share the

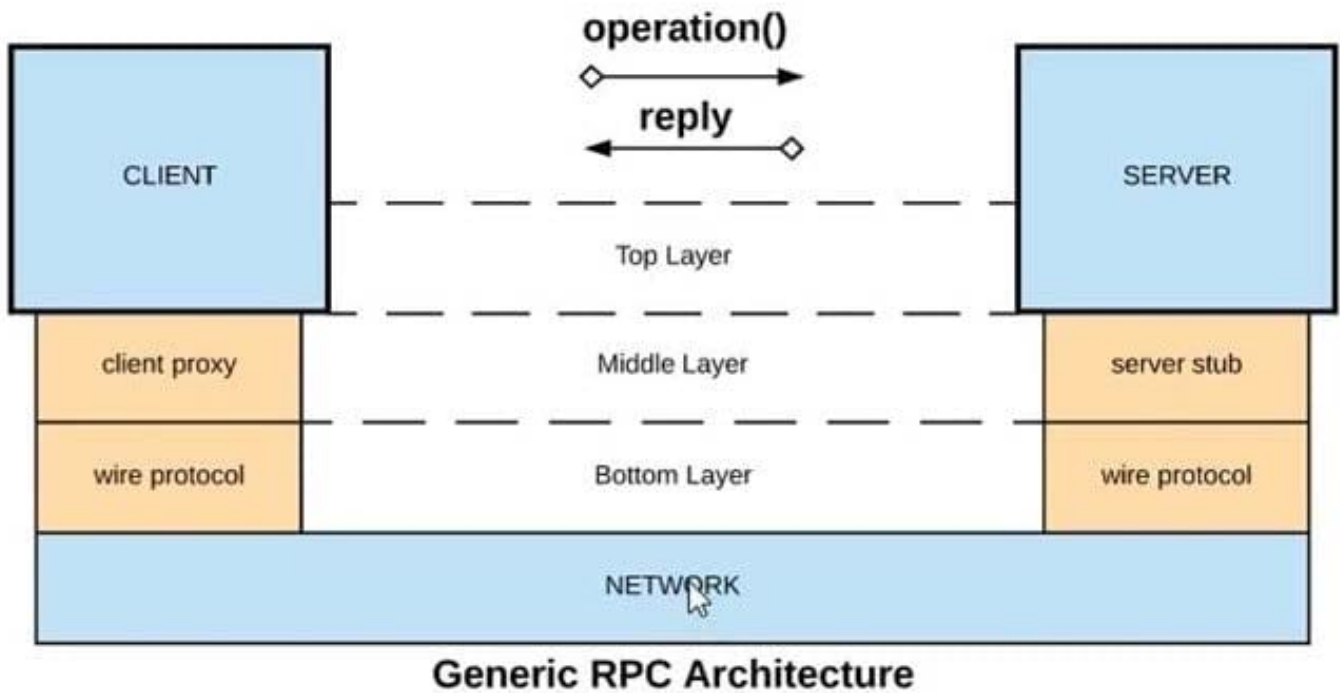

cache state.

Correct Answer: C

#### QUESTION 4

Refer to the exhibit.

What is a valid API in the sense of API-led connectivity and application networks?

Ⓐ A. Java RMI over TCP

Ⓑ B. XML over HTTP

C. CORBA over IIOP

D. XML over UDP

A. Option A

B. Option B

C. Option C

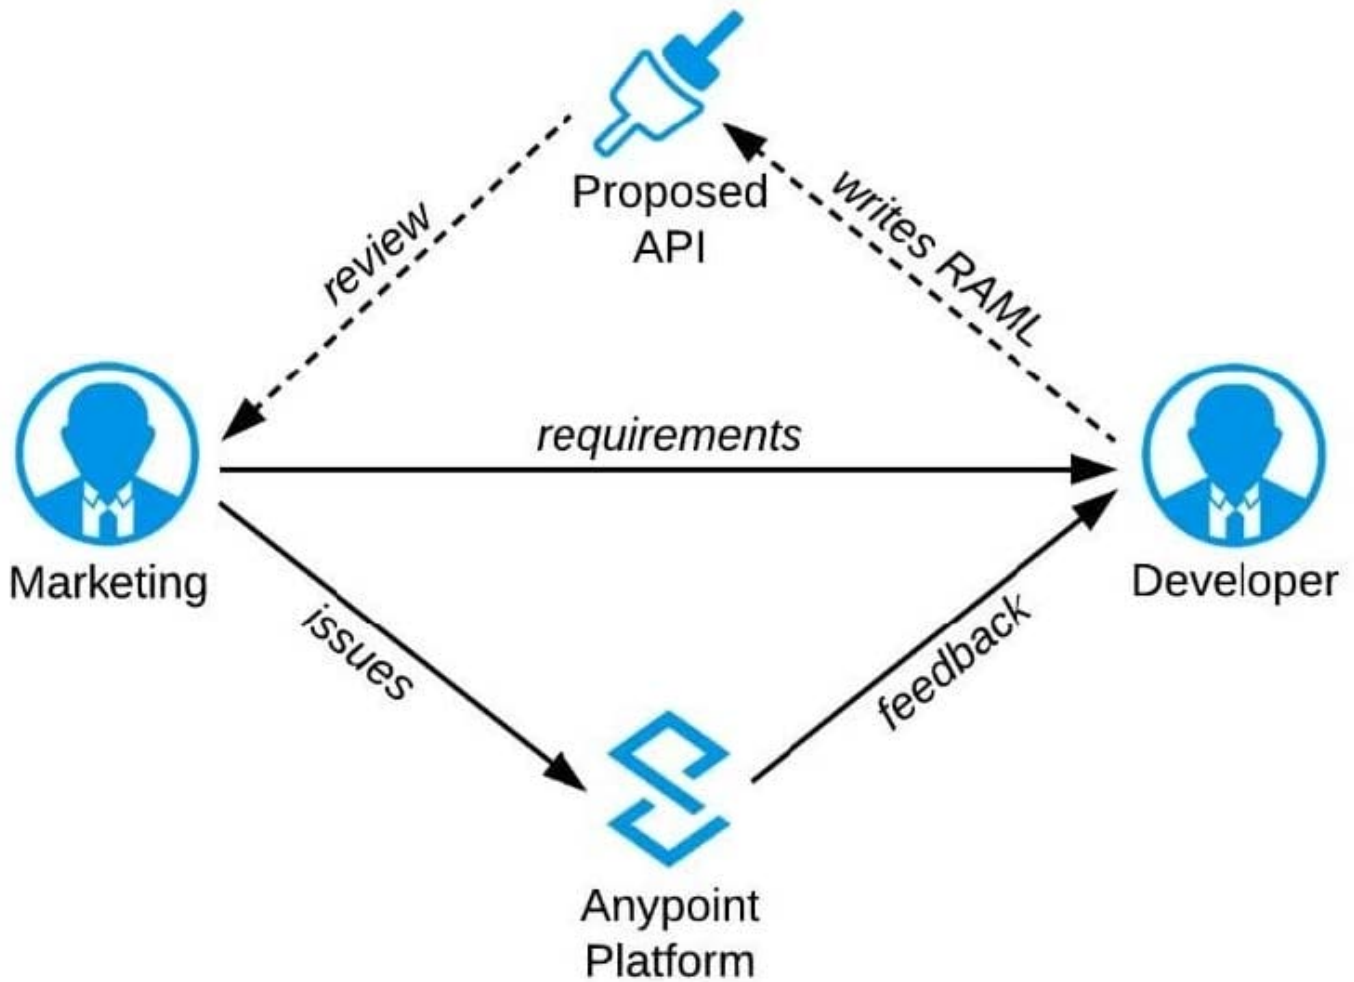

D. Option D

Correct Answer: B

QUESTION 5

Refer to the exhibit.

A RAML definition has been proposed for a new Promotions Process API, and has been published to Anypoint Exchange.

The Marketing Department, who will be an important consumer of the Promotions API, has important requirements and expectations that must be met.

What is the most effective way to use Anypoint Platform features to involve the Marketing Department in this early API design phase?

- Ⓐ. Ask the Marketing Department to interact with a mocking implementation of the API using the automatically generated API Console.

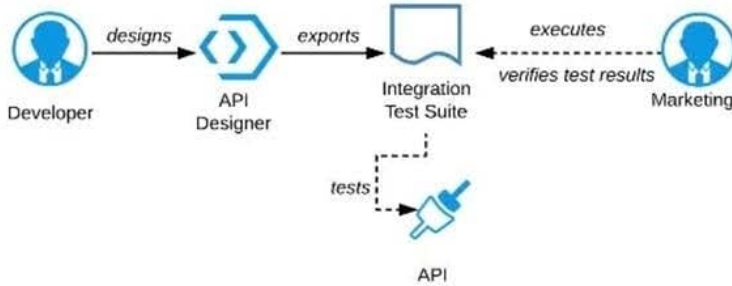

- Ⓑ. Organize a design workshop with the DBAs of the Marketing Department in which the database schema of the Marketing IT systems is translated into RAML.

- Ⓒ. Use Anypoint Studio to implement the API as a Mule application, then deploy that API implementation to CloudHub and ask the Marketing Department to interact with it.

- Ⓓ. Export an integration test suite from API designer and have the Marketing Department execute the tests in that suite to ensure they pass.

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A
