QUESTION 1

What is true about where an API policy is defined in Anypoint Platform and how it is then applied to API instances?

- A. The API policy is defined in Runtime Manager as part of the API deployment to a Mule runtime, and then ONLY applied to the specific API instance.
- B. The API policy is defined in API Manager for a specific API instance, and then ONLY applied to the specific API instance.
- C. The API policy is defined in API Manager and then automatically applied to ALL API instances.
- D. The API policy is defined in API Manager, and then applied to ALL API instances in the specified environment.

Correct Answer: B

QUESTION 2

What do the API invocation metrics provided by Anypoint Platform provide?

- A. ROI metrics from APIs that can be directly shared with business users
- B. Measurements of the effectiveness of the application network based on the level of reuse
- C. Data on past API invocations to help identify anomalies and usage patterns across various APIs
- D. Proactive identification of likely future policy violations that exceed a given threat threshold

Correct Answer: B

Reference: <https://usermanual.wiki/Document/APAAppNetstudentManual02may2018.991784750.pdf>

QUESTION 3

What should be ensured before sharing an API through a public Anypoint Exchange portal?

- A. The visibility level of the API instances of that API that need to be publicly accessible should be set to public visibility.
- B. The users needing access to the API should be added to the appropriate role in Anypoint Platform.
- C. The API should be functional with at least an initial implementation deployed and accessible for users to interact with.
- D. The API should be secured using one of the supported authentication/authorization mechanisms to ensure that data is not compromised.

Correct Answer: A

Reference: <https://docs.mulesoft.com/exchange/to-share-api-asset-to-portal>

QUESTION 4

An API implementation is deployed to CloudHub.

What conditions can be alerted on using the default Anypoint Platform functionality, where the alert conditions depend on the end-to-end request processing of the API implementation?

- A. When the API is invoked by an unrecognized API client
- B. When a particular API client invokes the API too often within a given time period
- C. When the response time of API invocations exceeds a threshold
- D. When the API receives a very high number of API invocations

Correct Answer: C

Reference: <https://docs.mulesoft.com/api-manager/2.x/using-api-alerts>

QUESTION 5

Refer to the exhibit.

A developer is building a client application to invoke an API deployed to the STAGING environment that is governed by a client ID enforcement policy.

What is required to successfully invoke the API?

- A. The client ID and secret for the Anypoint Platform account owning the API in the STAGING environment
- B. The client ID and secret for the Anypoint Platform account's STAGING environment
- C. The client ID and secret obtained from Anypoint Exchange for the API instance in the STAGING environment
- D. A valid OAuth token obtained from Anypoint Platform and its associated client ID and secret

Correct Answer: D

Reference: <https://docs.mulesoft.com/api-manager/2.x/policy-mule3-client-id-based-policies>
