QUESTION 1

A female patient comes into the clinic presenting with pain in the abdomen. The doctor notes that this could be dysmenorrhea.

Which of the following describes this diagnosis best?

- A. Painful menstruation
- B. Fluid-filled sac on the ovary
- C. A tear or split in the abdominal wall
- D. Kidney stone

Correct Answer: A

QUESTION 2

What must you follow in dealing with a blood sample if you are involved in drug testing?

- A. The chain of custody
- B. Law enforcement instructions
- C. Patient instructions
- D. None of these

Correct Answer: A

The chain of custody dictates the way in which a sample will be taken and how it will be guarded against tampering before, during and after testing. Make sure you know the regulations in place and follow them closely, otherwise you may be called upon to explain why you did not.

QUESTION 3

Which of these is the baseline procedure for preventing the spread of disease in medical institutions?

- A. Wearing gloves
- B. Wearing gowns
- C. Washing hands
- D. Wearing masks

Correct Answer: C

Hand-to-hand and hand to surface contact is the most common way for infection to spread in medical institutions.

Not everyone can wear gloves all day, but everyone can wash their hands thoroughly before and after patient contact, after using the bathroom, before eating food etc.

Make sure you follow the correct procedure at all times and encourage colleagues, visitors and patients to do the same.

QUESTION 4

Which of the following would be used to indicate someone has taken a file from the file cabinet?

- A. Patient chart
- B. Outguide
- C. Tickler file
- D. Summary form

Correct Answer: B

QUESTION 5

Which of these is used to drain fluid from the body?

- A. Catheter
- B. Intravenous drip
- C. Injection
- D. All of these

Correct Answer: A

A catheter is used to drain fluid from the body. It may be inserted in a body cavity, duct or vein.
