### QUESTION 1

After releasing care of a possible child abuse victim over to the emergency department staff, you are having a discussion with another ambulance crew who was not present at the incident. As you are describing your suspicion that the child's mother is the perpetrator of child abuse, you are overheard by one of the child's family members. What legal violation have you possibly committed?

- A. Libel
- B. Malfeasance
- C. Negligence
- D. Slander

Correct Answer: D

Slander is the act of injuring a person's character, name, or reputation by making a false or malicious statement with malicious intent or reckless disregard for the falsity of the statement. If you had put the statement into writing, that would constitute possible Libel. Negligence is a deviation from accepted standards of care. Malfeasance is a form of negligence involving the performance of a wrongful or unlawful act.

---

### QUESTION 2

The endotracheal tube is primarily intended to:

- A. Be placed into the esophagus
- B. Provide a medication route
- C. Be inserted into the trachea
- D. Be used as a means of suctioning the hypopharynx

Correct Answer: C

By inserting the endotracheal tube into the trachea you isolate the trachea from the esophagus therefore creating a patent airway.

---

### QUESTION 3

Which of the following routes of entry is the most common cause of anaphylactic reaction?

- A. Contact
- B. Ingestion
- C. Inhalation
- D. Injection

---

Correct Answer: D

Injection is the most common way an allergen will be exposed to a patient, medicine being injected by a syringe, insects stinging and animal bites

---

#### QUESTION 4

Name the layers of the heart from the outside in.

- A. Pericardium, endocardium, epicardium
- B. Myocardium, epicardium, endocardium
- C. Epicardium, myocardium, endocardium
- D. Endocardium, myocardium, epicardium

Correct Answer: C

The layers of the heart from the outer most to the innermost layer. The pericardium is actually the protective sac which surrounds the heart. The heart is covered with a thin layer of slippery tissue called the epicardium, it provides a surface which can move inside the pericardium without causing friction. The myocardium is the muscle tissue of the heart which conducts electricity which causes the muscle to squeeze pumping blood. The endocardium is made of the same type of tissue as the epicardium. The endocardium is very smooth to prevent clots from forming and adhering to the valves.

---

#### QUESTION 5

Patients commonly describe heart attack pain as which of the following characteristic?

- A. Like "pins and needles"
- B. Crushing or squeezing
- C. Intermittent (comes and goes)
- D. Less severe than indigestion

Correct Answer: B

Myocardial pain is often difficult to determine because it can take on many different characters; however, patients most commonly (over 40% of the time) describe the pain of a myocardial infarction as a crushing, squeezing, pressure that radiates outward to the arms and upper back.
