QUESTION 1

You should apply the AED pads to your patient when he

- A. Complains of trouble breathing.
- B. Appears confused and "out of it".
- C. Is pulseless and apneic.
- D. Is unconscious and vomiting.

Correct Answer: C

An AED should only be applied when the patient does not have a pulse nor respirations.

QUESTION 2

An often fatal complication of diabetes, which is also the first indication of diabetes in many young patients?

- A. Hypo glycemia
- B. Hypertension
- C. Cardiovascular disease
- D. Diabetic Ketoacidosis (DKA)

Correct Answer: D

Often the first signs and symptoms of diabetes on set is diabetic Ketoacidosis. When there is no fuel, glucose, for the cells to burn the cells will burn fat and protein which does not burn clean. The incomplete combustion produce acids which are not cleared and build up which can be fatal if not treated aggressively. Hypertension and cardiovascular disease are long term complications of diabetes.

QUESTION 3

In order to assist intubation, a paramedic may utilize Sellick's maneuver. What cartilage are you compressing?

- A. Cricoid cartilage
- B. Aryepiglottic cartilage
- C. Thyroid cartilage
- D. Hyoid cartilage

Correct Answer: A

While all of these structures are in the same general area, the paramedic specifically utilizes the Cricoid cartilage. This is particularly important since this is the only "full ring" cartilage

**QUESTION 4**

You are transporting a patient that is having night sweats, mild fever, and a productive cough. He states that the health department has been treating him at home for a respiratory condition. How should the patient be transported to the hospital?

- A. In a position of comfort
- B. With a mask on the patient and the EMT
- C. In a calm, passive manner
- D. In the left lateral recumbent position

Correct Answer: B

The patient that has possible TB should wear either a surgical mask or a nonrebreather mask. This is used to prevent the spread of the disease and to protect the safety of the health care provider.

QUESTION 5

A spontaneous pneumothorax is ?

- A. More common in women than men
- B. Caused by an impact to the chest that penetrates the lung
- C. A sudden accumulation of air in the pleural space
- D. Only seen in people with COPD

Correct Answer: C

Spontaneous pneumothorax is commonly seen in COPD Patients, but can also be caused by a rupture of certain types of blisters in the lung.
