QUESTION 1

What are three tiering policies that are associated with a FabricPool-enables aggregate? (Choose three.)

A. backup

B. mirror-vault

C. local-only

D. auto

E. snapshot-only

Correct Answer: ADE

QUESTION 2

You are configuring an FC switch to allow LUN access to a host system.

In this scenario, a switch needs a zone configuration file that includes which two elements? (Choose two.)

A. host initiator WWPN

B. SVM target WWNN

C. host initiator WWNN

D. SVM target WWPN

Correct Answer: AD

QUESTION 3

What is the purpose of Epsilon?

A. to monitor cluster health

B. to be used as a load-balancer for a 2-node cluster

C. to evaluate the differences in node configurations

D. to be used as a tie-breaker for a cluster quorum

Correct Answer: D

QUESTION 4

Click the Exhibit button.

```
Cluster_dst::> snapmirror policy show -policy XDPDefault -instance

                        Vserver:    vs0
          SnapMirror Policy Name:   XDPDefault
          SnapMirror Policy Type    vault
                   Policy Owner:    cluster-admin
                    Tries Limit:    8
               Transfer Priority:   normal
        Ignore accesstime Enabled:  false
          Transfer Restartability:  always
      Network Compression Enabled:  false
                 Create Snapshot:   false
                        Comment:    Default policy for XDP relationships with daily and weekly
                                    rules.
          Total Number of Rules:    2
                     Total Keep:    59
                          Rules:    SnapMirror Label    Keep   Preserve   Warn   Schedule   Prefix
                                    ----------------    ----   --------   ----   --------   ------
                                    daily               7      false      0      -          -
                                    weekly              52     false      0      -          -
```

An administrator realizes that daily snapshots are not being replicated to their destination. The

administrator can see the daily snapshots created at the source. The exhibit shows the policy in use.

Weekly snapshots are being replicated without a problem, and the SnapMirror relationship is showing as

"healthy".

In this scenario, what is causing the problem with the daily snapshot?

A. The SnapMirror label has not been applied to the daily snapshots.

B. The SVM peer is not working.

C. The daily snapshots at the source are busy due to the NDMP backup.

D. The vault policy applied to the source volume does not match the SnapMirror policy at the destination.

Correct Answer: B

QUESTION 5

Click the Exhibit button.

IPspace	Vserver List	Broadcast Domains
Cluster		
	Cluster	Cluster
Default		
	svm1, svm2, cluster1	Default
IPspace1		
	SVM1A, SVM2A,	IPspace1
IPspace2		
	SVM2A, SVM2B,	IPspace2

You execute the cluster1::> network ipspace show command, and notice that two IPspaces are not able to

be renamed or deleted.

Referring to the exhibit, what are these two IPspaces? (Choose two.)

A. IPspace1

B. Default

C. IPspace2

D. Cluster

Correct Answer: BD
