### QUESTION 1

You want to replicate all volumes of an SVM, including the SVM's configuration data, to another cluster on an hourly schedule.

Which action should you perform to accomplish this task?

- A. Configure SVM disaster recovery between the two SVMs.
- B. Configure SyncMirror between the two clusters.
- C. Configure SnapMirror replication for the volumes with a relationship type of DP.
- D. Configure SnapMirror replication for the volumes with a relationship type of XDP.

Correct Answer: A

### QUESTION 2

A customer has added a new user account, "jsmith", on a UNIX NFS client using the /etc/passwd file on that client. The NFS client has a mount, "/mountpoint", to an NTFS security style volume from an ONTAP SVM using NFSv3. The user "jsmith" does not exist in the Windows domain. The user "jsmith" must be able to access this mount, but cannot. According to company security policy, the customer cannot add the user "jsmith" to the Active Directory configuration.

Which two actions will solve the problem? (Choose two.)

- A. Enable default Windows users for unknown UNIX users.
- B. From the UNIX client, use the `chown -R jsmith /mountpoint`.
- C. Add the user to the /etc/passwd file on the storage controller.
- D. Configure the default Windows user to allow access to the proper SMB data.

Correct Answer: BD

---

### QUESTION 3

You are migrating volumes from an older aggregate to a new aggregate using the `vol move` command. You notice that, after completion, access to these volumes is slower until a certain process finishes. Which process is causing the problem in this scenario?

- A. `deswizzling`
- B. active bitmap rearrangement
- C. `snap create`

---

D. container block reclamation

Correct Answer: D

---

#### QUESTION 4

You have severe database performance issues with a server connected to 8-Gb FC switches to storage. You know that the problem is not the storage because the QoS output indicates that the issue is outside the controller. You need to examine each piece of the chain, such as switch port status and the host contribution to latency.

In this scenario, which NetApp product would provide the required information?

- A. OnCommand Unified Manager
- B. OnCommand Insight
- C. SnapDrive
- D. OnCommand Performance Manager

Correct Answer: D

---

#### QUESTION 5

You order a FAS8200 cluster with 4 TB SATA drives. Before executing the cluster setup command, you notice that ADP is not being used.

In this scenario, which statement is correct?

- A. Halt the nodes and configure ADP at the LOADER-X> prompt.
- B. Complete the cluster setup and use OnCommand System Manager to configure ADP.
- C. While executing the cluster setup command, reconfigure the disks to use ADP.
- D. Halt the nodes, boot to the special boot menu, and configure ADP.

Correct Answer: D
