- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

An administrator who is using the Virtual Storage Console (VSC) creates a new FC datastore on an existing volume. While the datastore was provisioned, two hosts were in maintenance mode. When the maintenance was completed, the two hosts do not have access to the new datastore, but they have access to other datastores on the same volume.

In this scenario, what caused this result?

- A. The VSC cannot create datastores while hosts are in maintenance mode.
- B. During host maintenance, the FC HBAs were replaced with different FC HBAs.
- C. The VSC created a new igroup that contains only the hosts that were online during the datastore creation.
- D. After creation using the VSC, the administrator needs to create a LUN mapping.

Correct Answer: C

QUESTION 2

Which commands allow you to enable NetApp deduplication and verify space savings?

- A. sis on , sis start , df s
- B. asis on , asis start , df s
- C. sis on , sis start , df r
- D. sis on, sis start, df p

Correct Answer: A

QUESTION 3

Exhibit.

```
cl1::> lun mapping show
vservers      path          igroup lun-id reporting-nodes
-----
SVM1          /vol/host1/lun0  linux1 0      cl1-01, cl1-02
SVM1          /vol/host2/lun0  linux2 0      cl1-01, cl1-02

cl1::> lun show
vservers      path          State  Mapped  Type  Size
-----
SVM1          /vol/host1/lun0  online mapped  linux 10GB
SVM1          /vol/host2/lun0  online mapped  linux 20MB
```

During a data mobility test on a 4-node ONTAP 9.3 cluster, the host loses direct access to its LUNs. The LUNs are hosting on node cl1-01 and are being moved to cl1-03 on a different HA pair. Referring to the exhibit, which corrective

step is needed to ensure access while the volume is moved?

- A. Add reporting nodes for cl1-03 and cl1-04.
- B. Create additional LIFs on cl1-01 and cl1-02.
- C. Create a new destination volume on cl1-03.
- D. Create new igroups on cl1-03 and cl1-04.

Correct Answer: A

QUESTION 4

You created a LUN in a new volume on your Netapp ONTAP cluster. You enabled the default snapshot schedule and enabled snapshot autodelete on the volume. In this scenario, in which three situations does the snapshot autodelete feature automatically delete snapshot copies in the volume? (choose three)

- A. The snapshot reserve space is nearly full
- B. The LUN is nearly full
- C. The overwrite reserve space is full
- D. The volume is nearly full
- E. The aggregate is nearly full

Correct Answer: ACD

Depending on what is selected in the "Trigger" option, Snapshot Autodelete will automatically delete a snapshot when, either the volume space utilized, or the snapshot reserve reaches a threshold capacity specified below. Automatic deletion of Snapshot copies from flexible volumes Data ONTAP can automatically delete one or more Snapshot copies on the volume, provided the Data ONTAP Snapshot copy autodeletion policy is enabled and set to trigger when the overwrite reserve is nearly full on the volume. You can find more information on this link:

QUESTION 5

Which native GUI switch tool is used to manage Cisco MDS-Series switches and directors?

- A. Operations Manager
- B. Fabric Manager
- C. Web Tools
- D. Data Fabric Manager

Correct Answer: B
