QUESTION 1

Your customer wants to implement SVM DR, but the customer is not certain whether the identity-preserve parameter should be enabled. The customer explains that the source and destination clusters are in different network subnets. In this scenario, which SVM DR solution should the customer use?

- A. SVM DR using the identity-preserve parameter disabled and the default SnapMirror policy.
- B. SVM DR using the identity-preserve parameter enabled and then administratively take the data LIFs offline on the DR cluster.
- C. SVM DR with the identity-preserve parameter enabled and a SnapMirror policy with the discard-configs network parameter.
- D. SVM DR with the identity-preserve parameter enabled and the default SnapMirror policy.

Correct Answer: D

QUESTION 2

You want to modify the existing Snapshot copy schedule to allow for more granularity in your ability to recover data after a corruption or loss. In this scenario, which two tools allow you to accomplish this task (Choose two.)

- A. OnCommand System Manager
- B. OnCommand Unified Manager
- C. NetApp SnapCenter
- D. ONTAP CLI

Correct Answer: BD

QUESTION 3

You have set up a SnapMirror relationship between two SVMs for data protection. The data in the source volume is unavailable due to an event related to a virus infection leading to data corruption. In this scenario, which three actions are required to activate the SnapMirror destination volume and provide data access to the users? (Choose three.)

- A. Perform a SnapMirror quiesce operation.
- B. Disable the source volume by taking it offline.
- C. Configure the destination volume for data access.
- D. Verify the status of the source and destination volumes.
- E. Perform a SnapMirror break operation.

Correct Answer: CDE

QUESTION 4

You are running a NetApp AFF A220 cluster. Each node has one volume. You create Snapshot copies on both volumes every four hours and keep the copies for 30 days. You are running out of disk space and want to free up space. In this scenario, what do you do?

- A. Add a disk shelf with NL-SAS HDDs.
- B. Activate aggregate-inline deduplication.
- C. Add a capacity tier and set the tiering policy to snapshot-only.
- D. Activate aggregate-background deduplication.

Correct Answer: B

QUESTION 5

A customer is using SnapMirror to replicate their data to a remote site. They notice that storage efficiency is not preserved, and the amount of data at the destination is higher than expected. In this scenario, which configuration in the destination volume would cause this issue?

- A. Post process deduplication is enabled on the destination.
- B. The volumes are not thin-provisioned on the destination.
- C. Post process compression is enabled on the destination.
- D. There is an existing FlexClone volume on the destination.

Correct Answer: D
