### QUESTION 1

An administrator is required to maintain a software inventory on the endpoints. without showing the feature on the FortiClient dashboard What must the administrator do to achieve this requirement?

- A. The administrator must use default endpoint profile
- B. The administrator must not select the vulnerability scan feature in the deployment package.
- C. The administrator must select the vulnerability scan feature in the deployment package, but disable the feature on the endpoint profile
- D. The administrator must click the hide icon on the vulnerability scan tab

Correct Answer: D

---

### QUESTION 2

Which two statements are true about the ZTNA rule? (Choose two. )

- A. It enforces access control
- B. It redirects the client request to the access proxy
- C. It defines the access proxy
- D. It applies security profiles to protect traffic

Correct Answer: AD

"A ZTNA rule is a proxy policy used to enforce access control. ZTNA tags or tag groups can be defined to enforce zero trust role based access. Security profiles can be configured to protect this traffic."

"ZTNA rules help control access by defining users and ZTNA tags to perform user authentication and security posture checks. And just like firewall policies, you can control the source and destination addresses, and apply appropriate security

profiles to scan the traffic."
