QUESTION 1

View the following exhibit.

When using Install Config option to install configuration changes to managed FortiGate, which of the following statements are true? (Choose two.)

- A. Once initiated, the install process cannot be canceled and changes will be installed on the managed device
- B. Will not create new revision in the revision history
- C. Installs device-level changes to FortiGate without launching the Install Wizard
- D. Provides the option to preview configuration changes prior to installing them

Correct Answer: AC

QUESTION 2

An administrator with the Super_User profile is unable to log in to FortiManager because of an authentication failure message.

Which troubleshooting step should you take to resolve the issue?

- A. Make sure FortiManager Access is enabled in the administrator profile
- B. Make sure Offline Mode is disabled
- C. Make sure the administrator IP address is part of the trusted hosts.
- D. Make sure ADOMs are enabled and the administrator has access to the Global ADOM

Correct Answer: C

An administrator has created a firewall address object, Training, which is used in the Local-FortiGate policy package. When the install operation is performed, which IP Netmask will be installed on the Local-FortiGate, for the Training firewall address object?

- A. 10.0.1.0/24
- B. It will create firewall address group on Local-FortiGate with 192.168.0.1/24 and 10.0.1.0/24 object values
- C. 192.168.0.1/24
- D. Local-FortiGate will automatically choose an IP Network based on its network interface settings.

Correct Answer: A

QUESTION 4

Refer to the exhibit.

The screenshot shows the 'Create New ADOM' configuration page in FortiManager. The 'Name' field is set to 'Training'. The 'Type' is set to 'FortiGate', and the version is set to '6.2'. The 'Comments' field is empty. The 'Devices' section shows a '+ Select Device' button and a table with columns 'Name', 'IP Address', and 'Platform'. The table is currently empty with the text 'Click to select devices for this ADOM.' below it. The 'Mode' is set to 'Normal' (radio button selected) and 'Backup' (radio button unselected).

Which two statements about an ADOM set in Normal mode on FortiManager are true? (Choose two.)

- A. It supports the FortiManager script feature
- B. It allows making configuration changes for managed devices on FortiManager panes
- C. FortiManager automatically installs the configuration difference in revisions on the managed FortiGate
- D. You cannot assign the same ADOM to multiple administrators

Correct Answer: AB

"FortiGate units in the ADOM will query their own configuration every 5 seconds. If there has been a configuration change, the FortiGate unit will send a diff revision on the change to the FortiManager using the FGFM protocol."

QUESTION 5

Refer to the exhibits. Exhibit one.

The screenshot shows a network configuration interface with several panels. The 'DNS' panel is highlighted with a red box and contains the following fields:

- Primary DNS Server: 192.168.1.111
- Secondary DNS Server: 192.168.1.112
- Local Domain Name: (empty)

The 'Alert Email' panel contains:

- SMTP Server: (empty)
- Authentication: Enable
- SMTP User: (empty)
- Password: (masked with asterisks)

The 'SNMP' panel shows:

- SNMP Agent: Enable
- SNMP v1/v2c: (empty)
- SNMP v3: (empty)

Other visible panels include 'NTP Server' (Synchronize with NTP Server:), 'Admin Settings' (HTTP Port: 80, HTTPS Port: 443, SSH Port: 22, Idle Timeout: 5, Enable SCP: OFF, Switch Controller: OFF), 'View Settings' (Language: English, Lines per page: 50, Theme: Green), and 'Replacement Message' (table with columns Name and Description).

Exhibit two.

```
Install Preview

Virtual Domain: global, root

config system ntp
unset ntpsync
end
config system email-server
unset server
unset security
end
config log fortianalyzer setting
unset status
unset server
unset upload-option
unset reliable
unset serial
end
config system central-management
config server-list
purge
end
end
config system global
unset admintimeout
unset admin-https-redirect
end
config system dns
set primary 192.168.1.111
set secondary 192.168.1.112
end
config system snmp sysinfo
```

An administrator created a new system template named Training with two new DNS addresses on FortiManager. During the installation preview stage, the administrator notices that many unset commands need to be pushed.

What can be the main reason for these unset commands?

- A. The DNS addresses in the default system settings are the same as the Training system template
- B. The Training system template has other default settings
- C. The ADOM is locked by another administrator
- D. The Training system template does not have assigned devices

Correct Answer: B
