```

Refer to the exhibit. You attempted to deploy the FortiGate-VM in Microsoft Azure with the JSON template, and it failed to boot up. The exhibit shows an excerpt from the JSON template.

What is incorrect with the template?

- A. The LUN ID is not defined.
- B. FortiGate-VM does not support managedDisk from Azure.
- C. The caching parameter should be None.
- D. The CreateOptions parameter should be FromImage.

Correct Answer: D

### **QUESTION 2**

You have been asked to secure your organization\\'s salesforce application that is running on Microsoft Azure, and find an effective method for inspecting shadow IT activities in the organization. After an initial investigation, you find that many users access the salesforce application remotely as well as on-premises. Your goal is to find a way to get more visibility, control over shadow IT-related activities, and identify any data leaks in the salesforce application.

Which three steps should you take to achieve your goal? (Choose three.)

- A. Deploy and configure FortiCASB with a Fortinet FortiCASB subscription license.
- B. Configure FortiCASB and set up access rights, privileges, and data protection policies.

2024 Latest geekcert NSE7\_PBC-6.4 PDF and VCE dumps Download

- C. Use FortiGate, FortiGuard, and FortiAnalyzer solutions.
- D. Deploy and configure FortiCWP with a workload guardian license.
- E. Deploy and configure FortiGate with Security Fabric solutions, and FortiCWP with a storage guardian advance license.

Correct Answer: ABC

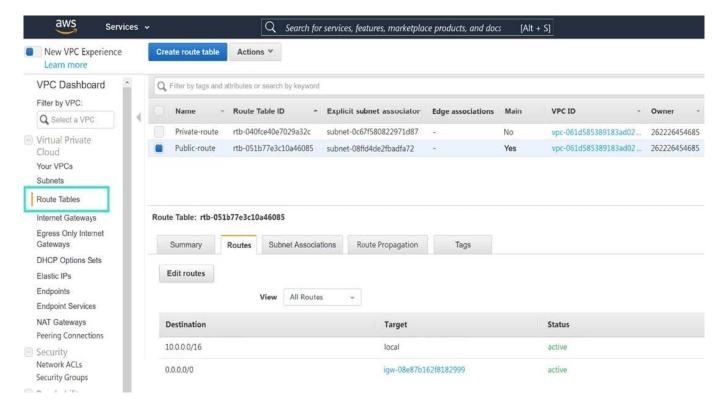

### **QUESTION 3**

Which two statements about Microsoft Azure network security groups are true? (Choose two.)

- A. Network security groups can be applied to subnets and virtual network interfaces.
- B. Network security groups can be applied to subnets only.
- C. Network security groups are stateless inbound and outbound rules used for traffic filtering.
- D. Network security groups are a stateful inbound and outbound rules used for traffic filtering.

Correct Answer: BD

Reference: https://docs.microsoft.com/en-us/azure/virtual-network/network-security-groups-overview

Refer to the exhibit. In your Amazon Web Services (AWS) virtual private cloud (VPC), you must allow outbound access to the internet and upgrade software on an EC2 instance, without using a NAT instance. This specific EC2 instance is running in a private subnet: 10.0.1.0/24.

Also, you must ensure that the EC2 instance source IP address is not exposed to the public internet. There are two

subnets in this VPC in the same availability zone, named public (10.0.0.0/24) and private (10.0.1.0/24).

How do you achieve this outcome with minimum configuration?

- A. Deploy a NAT gateway with an EIP in the private subnet, edit the public main routing table, and change the destination route 0.0.0.0/0 to the target NAT gateway.
- B. Deploy a NAT gateway with an EIP in the public subnet, edit route tables, select Public-route, and delete the route destination 10.0.0.0/16 to target local.
- C. Deploy a NAT gateway with an EIP in the private subnet, edit route tables, select Private-route, and add a new route destination 0.0.0.0/0 to the target internet gateway.
- D. Deploy a NAT gateway with an EIP in the public subnet, edit route tables, select Private-route and add a new route destination 0.0.0.0/0 to target the NAT gateway.

#### **QUESTION 4**

When an organization deploys a FortiGate-VM in a high availability (HA) (active/active) architecture in Microsoft Azure, they need to determine the default timeout values of the load balancer probes.

In the event of failure, how long will Azure take to mark a FortiGate-VM as unhealthy, considering the default timeout values?

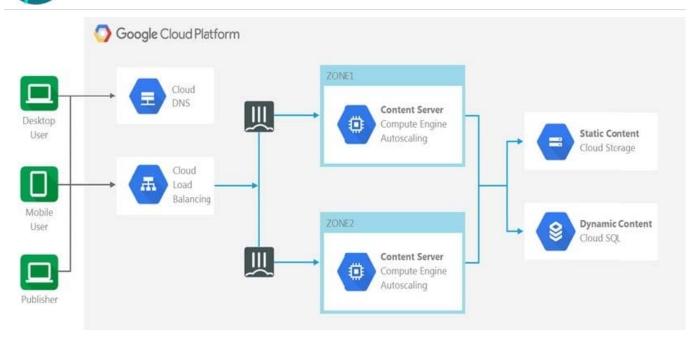

- A. Less than 10 seconds
- B. 30 seconds
- C. 20 seconds
- D. 16 seconds

Correct Answer: B

### **QUESTION 5**

Refer to the exhibit. The exhibit shows a topology where multiple connections from clients to the same FortiGate-VM instance, regardless of the protocol being used, are required.

Which two statements are correct? (Choose two.)

- A. The design shows an active-active FortiGate-VM architecture.
- B. The Cloud Load Balancer Session Affinity setting should be changed to CLIENT\_IP.
- C. The design shows an active-passive FortiGate-VM architecture.
- D. The Cloud Load Balancer Session Affinity setting should use the default value.

Correct Answer: AB
