### QUESTION 1

Refer to the exhibit.

As shown in the exhibit, a FortiADC is load-balancing IPv4 traffic between two next-hop routers. The FortiADC does not know the IP addresses of the servers. Also, the FortiADC is doing Layer 7 content inspection and modification.

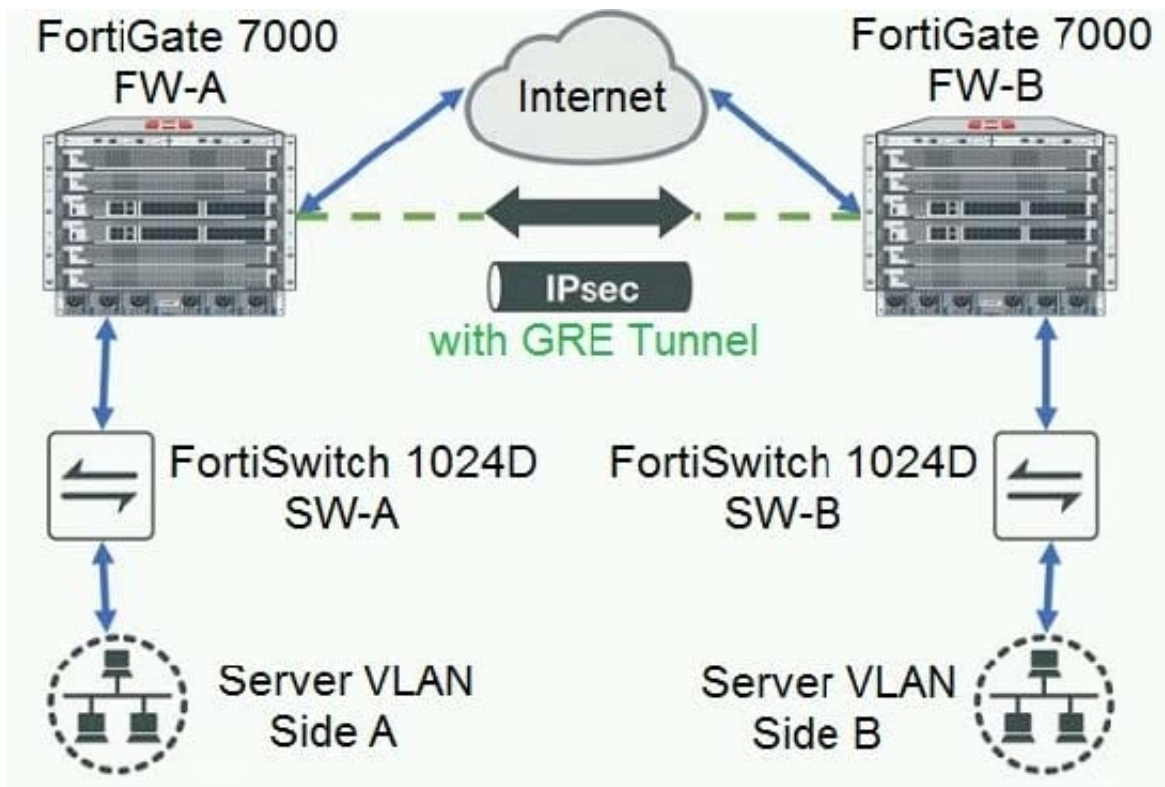

In this scenario, which application delivery control is configured in the FortiADC?

- A. Layer 3
- B. Layer 4
- C. Layer 7
- D. Layer 2

Correct Answer: D

### QUESTION 2

Refer to the exhibit.

You have two data centers with a FortiGate 7000-series chassis connected by VPN. All traffic flows over an established generic routing encapsulation (GRE) tunnel between them. You are troubleshooting traffic that is traversing between Server VLAN A and Server VLAN B. The performance is lower than expected and you notice all traffic is only going through the FPM in slot 3 while nothing through the FPM in slot 4.

Referring to the exhibit, which statement is true?

- A. Removing traffic shaping from the firewall policy allowing this traffic will allow for load-balancing to the other module.
- B. Changing the algorithm to take source IP, destination IP and port into account will load balance this traffic to the other module.
- C. There is no way to load-balance the traffic in this scenario.
- D. Configuring a load-balance flow-rule in the CLI will load-balance this traffic.

Correct Answer: D

### QUESTION 3

You must create a High Availability deployment with two FortiWebs in Amazon Web Services (AWS); each on different Availability Zones (AZ) from the same region. At the same time, each FortiWeb should be able to deliver content from the Web servers of both of the AZs.

Which deployment would fulfill this requirement?

- A. Configure the FortiWebs in Active-Active HA mode and use AWS Elastic Load Balancer (ELB) for the internal Web servers.

- B. Use AWS Elastic Load Balancer (ELB) for both the FortiWebs in standalone mode and the internal Web servers in an ELB sandwich.
- C. Configure the FortiWebs in Active-Active HA mode and use AWS Route 53 to load balance the internal Web servers.
- D. Use AWS Route 53 to load balance the FortiWebs in standalone mode and use AWS Virtual Private Cloud (VPC) Peering to load balance the internal Web servers.

Correct Answer: B

---

#### QUESTION 4

You want to access the JSON API on FortiManager to retrieve information on an object. In this scenario, which two methods will satisfy the requirement? (Choose two.)

- A. Download the WSDL file from FortiManager administration GUI.
- B. Make a call with the curl utility on your workstation.
- C. Make a call with the SoapUI API tool on your workstation.
- D. Make a call with the Web browser on your workstation.

Correct Answer: AC

---

#### QUESTION 5

You want to manage a FortiGate with the FortiCloud service. The FortiGate shows up in your list of devices on the FortiCloud Web site, but all management functions are either missing or grayed out.

Which statement is correct in this scenario?

- A. The management tunnel mode on the managed FortiGate must be changed to normal.
- B. The managed FortiGate is running a version of FortiOS that is either too new or too old for FortiCloud.
- C. The managed FortiGate requires that a FortiCloud management license be purchased and applied.
- D. You must manually configure system central-management on the FortiGate CLI and set the management type to fortiguard.

Correct Answer: D
