QUESTION 1

What two tools can an administrator use to debug an issue with an Apex trigger?

- A. Apex Logs in Setup
- B. Error Logs in the Developer Console
- C. Log Inspector in the Developer Console
- D. Debug Logs in Setup

Correct Answer: CD

The administrator can use two tools to debug an issue with an Apex trigger:

Log Inspector in the Developer Console and Debug Logs in Setup. The Log Inspector is a tool that displays a graphical representation of a debug log, which is a record of database operations, system processes, and errors that occur when

executing a transaction or running unit tests. The Log Inspector helps you analyze and troubleshoot your code by highlighting errors, checkpoints, and execution times. The Debug Logs page in Setup lets you monitor and retain debug logs for

users, Apex classes, Apex triggers, and Lightning components. You can view, download, or delete debug logs from this page.

QUESTION 2

Which three components can be used to modify the user experience in the Order Summary detail page?

- A. Tabs
- B. Accordion
- C. Related List-Single
- D. Related List - Double

Correct Answer: ABC

Three components that can be used to modify the user experience in the Order Summary detail page are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or

functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or

functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record. A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The

administrator can use the Lightning App Builder to add and customize related list- single on the Order Summary detail page to give users more access and context.

QUESTION 3

Order Allocation should work on Order Items in which status?

- A. Pending
- B. created
- C. Ordered
- D. Awaiting Allocation

Correct Answer: D

Order Allocation should work on Order Items in Awaiting Allocation status. This status indicates that the Order Item has been confirmed by the customer and is ready to be allocated to a Fulfillment Order based on routing rules and inventory availability.

QUESTION 4

An Order Summary has three Fulfillment Orders and two Credit Memos associated with it. How many Invoices will be created when using the Create Invoice Apex action in a flow?

- A. 2.0
- B. 5.0
- C. 1.0
- D. 3.0

Correct Answer: C

One invoice will be created when using the Create Invoice Apex action in a flow. The Create Invoice Apex action is a custom action that creates an invoice for an order summary. An invoice is a document that requests payment from a customer for an order. An invoice can include one or more fulfillment orders and one or more credit memos. A fulfillment order is a record that represents a part of an order that is fulfilled by a specific location. A credit memo is a record that represents a partial or full refund for an order or a fulfillment order. An order summary can have multiple fulfillment orders and credit memos associated with it, but only one invoice will be created for the entire order summary. QUESTION 5

Which option is available for an admin to use as middleware to import data to. or export data from Order Management?

- A. Use Workbench to access the database
- B. Use the Developer console
- C. Find an application on AppExchange
- D. Write Apex classes to query the database and write to a file
- E. Use Data Loader

Correct Answer: E

Use Data Loader. Data Loader is a client application that allows administrators to bulk import or export data from Salesforce using CSV files. The administrator can use Data Loader to import data into Order Management objects, such as Order Summary, Order Item Summary, Fulfillment Order, etc., or export data from these objects for backup or analysis purposes.
