QUESTION 1

An admin is analyzing project requirements and notes that there are requirements to support both high volume and multiple locations. What is the recommended approach for this scenario?

- A. Download the Single Location High Volume sample flow from the Partner Community and modify all the flows to loop through locations
- B. Download the Multiple Locations sample flow from the Partner Community and have developers add Apex code to enhance performance
- C. Download the Single Location High Volume sample flow and the Multiple Locations sample flow from the Partner Community and make a blend between the two considering trade-offs
- D. Download the Single Location High Volume sample flow from the Partner Community and have the developers add Apex code to enhance performance

Correct Answer: C

The Single Location High Volume sample flow and the Multiple Locations sample flow are two examples of how to implement order fulfillment with Order Management. The Single Location High Volume sample flow is optimized for performance and scalability, but it only supports one fulfillment location per order. The Multiple Locations sample flow supports multiple fulfillment locations per order, but it has lower performance and scalability. To support both high volume and multiple locations, an admin can download both sample flows from the Partner Community and make a blend between them, considering trade-offs such as complexity, maintainability, and customizability. QUESTION 2

Users are reporting slow load times for Lightning Record Pages. How can an administrator analyze the performance?

- A. Use the Analyze function in the Lightning Record Page editor
- B. Run a performance analysis using the Developer Console
- C. Use the Page Layout Analysis tool in Setup
- D. Use Chrome DevTools

Correct Answer: A

The Analyze function in the Lightning Record Page editor helps an administrator analyze the performance of a Lightning Record Page. It provides recommendations on how to improve the page load time, such as removing unused components, reducing the number of fields, or using conditional visibility rules.

QUESTION 3

Which three objects need to be utilized when creating orders using the composite API?

- A. Pricebook Entry

- B. Contact
- C. Order Summary
- D. Product
- E. Account

Correct Answer: ABE

The Pricebook Entry, Contact, and Account objects are required when creating orders using the composite API. The composite API is a REST API that allows creating multiple records in one request. To create an order using the composite

API, an administrator needs to provide the following information:

The Account ID of the customer who placed the order
The Contact ID of the customer who placed the order
The Pricebook Entry IDs of the products that are ordered
The quantity and unit price of each product

The order status and currency

QUESTION 4

An administrator needs to send an Outbound Message to an external accounting system whenever a Fulfillment Order is created. What is the best practice to create this functionality?

- A. Create a Process Builder
- B. Create a Flow
- C. Create an Apex Trigger
- D. Create a Workflow Rule

Correct Answer: A

The best practice to create this functionality is to use a Process Builder. A Process Builder is a declarative tool that allows administrators to automate business processes based on certain criteria and actions. The administrator can create a Process Builder that triggers when a Fulfillment Order is created, and then executes an Outbound Message action that sends the information to the external accounting system. https://help.salesforce.com/s/articleView?id=sf.process_overview.htm&type=5

QUESTION 5

When can an Invoice be created?

- A. At any point before the Fulfillment Order is created, by customizing flow "Create Invoice and Ensure Funds"
- B. At any point before the Fulfillment Order is created, by customizing flow "Create invoice"
- C. At any point after the Fulfillment Order is created, by customizing flow "Create Invoice and Ensure Funds"

D. At any point after the Fulfillment Order is created, by customizing flow "Create Invoice\\'

Correct Answer: D

The correct time and way for creating an Invoice is at any point after the Fulfillment Order is created, by customizing flow "Create Invoice". This flow is a core action that creates an Invoice record from a Fulfillment Order record, and updates the status of both records accordingly. The administrator can customize this flow to suit their business needs, such as adding conditions, actions, or subflows.
