- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

## QUESTION 1

### DRAG DROP

Match the Identity and Access Management (IAM) security control with the appropriate definition.

Select and Place:

IAM security		Ensuring least-privileged access to cloud resources and infrastructure
Machine Identity		Discovering threats by identifying activity that deviates from a normal baseline
User Entity Behavior Analytics		Securing and managing the relationships between users and cloud resources
Access Management		Decoupling workload identity from IP addresses

Correct Answer:

	IAM security	Ensuring least-privileged access to cloud resources and infrastructure
	User Entity Behavior Analytics	Discovering threats by identifying activity that deviates from a normal baseline
	Access Management	Securing and managing the relationships between users and cloud resources
	Machine Identity	Decoupling workload identity from IP addresses

## QUESTION 2

Which statement describes DevOps?

- A. DevOps is its own separate team
- B. DevOps is a set of tools that assists the Development and Operations teams throughout the software delivery process
- C. DevOps is a combination of the Development and Operations teams
- D. DevOps is a culture that unites the Development and Operations teams throughout the software delivery process

Correct Answer: D

DevOps is not:

A combination of the Dev and Ops teams: There still are two teams; they just operate in a communicative, collaborative way.

Its own separate team: There is no such thing as a "DevOps engineer." Although some companies may appoint a "DevOps team" as a pilot when trying to transition to a DevOps culture, DevOps refers to a culture where developers, testers,

and operations personnel cooperate throughout the entire software delivery lifecycle. A tool or set of tools: Although there are tools that work well with a DevOps model or help promote DevOps culture, DevOps ultimately is a strategy, not a

tool. Automation: Although automation is very important for a DevOps culture, it alone does not define DevOps.

### QUESTION 3

Which analysis detonates previously unknown submissions in a custom-built, evasion-resistant virtual environment to determine real-world effects and behavior?

- A. Dynamic
- B. Pre-exploit protection
- C. Bare-metal
- D. Static

Correct Answer: A

The WildFire cloud-based malware analysis environment is a cyber threat prevention service that identifies unknown malware, zero-day exploits, and advanced persistent threats (APTs) through static and dynamic analysis in a scalable, virtual environment.

### QUESTION 4

Data Loss Prevention (DLP) and Cloud Access Security Broker (CASB) fall under which Prisma access service layer?

- A. Network
- B. Management

C. Cloud

D. Security

Correct Answer: D

A SASE solution converges networking and security services into one unified, cloud-delivered solution (see Figure 3-12) that includes the following:

Networking

Software-defined wide-area networks (SD-WANs)

Virtual private networks (VPNs)

Zero Trust network access (ZTNA)

Quality of Service (QoS)

Security

Firewall as a service (FWaaS)

Domain Name System (DNS) security

Threat prevention

Secure web gateway (SWG)

Data loss prevention (DLP)

Cloud access security broker (CASB)

---

## QUESTION 5

Which Palo Alto Networks tools enable a proactive, prevention-based approach to network automation that accelerates security analysis?

A. MineMeld

B. AutoFocus

C. WildFire

D. Cortex XDR

Correct Answer: B

"Palo Alto Networks AutoFocus enables a proactive, prevention-based approach to network security that puts automation to work for security professionals. Threat intelligence from the service is made directly accessible in the Palo Alto Networks platform, including PAN-OS software and Panorama. AutoFocus speeds the security team's existing workflows, which allows for in-depth investigation into suspicious activity, without additional specialized resources."
