QUESTION 1

A developer is writing code that requires making callouts to an external web service. Which scenario necessitates that the callout be made in an @future method?

- A. The callouts will be made in an Apex Test class.
- B. The callouts will be made in an Apex Trigger.
- C. The callout could take longer than 60 seconds to complete.
- D. over 10 callouts will be made in a single transaction.

Correct Answer: B

QUESTION 2

Consider the controller code above that is called from a Lightning component and returns data wrapped in a class.

```
public class myServerSideController {
    @AuraEnabled
    public static MyDataWrapper getSomeData( String theType ) {
        Some_Object__c someObj = [
            SELECT ID, Name
            FROM Some_Object__c
            WHERE Type__c = :theType
            LIMIT 1
        ];

        Another_Object__c anotherObj = [
            SELECT ID, Option__c
            FROM Another_Object__c
            WHERE Some_Object__c = :someObj.Name
            LIMIT 1
        ];

        MyDataWrapper theData = new MyDataWrapper();

        theData.Name = someObj.Name;
        theData.Option = anotherObj.Option__c;
        return theData;
    }

    public class MyDataWrapper {
        public String Name { get; set; }
        public String Option { get; set; }

        public MyDataWrapper() {}
    }
}
```

Consider the controller code above that is called from a Lightning component and returns data wrapped in a class.

The developer verified that the Queries return a single record each and there is error handling in the Lightning

component, but the component is not getting anything back when calling the controller `getSomeData()`.

What is wrong?

- A. The member's Name and Option of the class `MyDataWrapper` should be annotated with `@AuraEnabled` too.
- B. The member's Name and Option should not be declared public.
- C. The member's Name and Option should not have getter and setter.
- D. Instances of Apex classes such as `MyDataWrapper` cannot be returned to a Lightning component.

Correct Answer: A

QUESTION 3

A developer is creating a Lightning web component that contains a child component. The property `stage` is being passed from the parent to the child. The public property is changing, but the `setOppList` function is not being invoked.

```
@api stage;
opp:
connectedCallback() {
    this.opp = this.setOppList(this.stage);
}
```

What should the developer change to allow this?

- A. Move the logic from `connectedCallback()` to `constructor()`.
- B. Create a custom event from the parent component to set the property.
- C. Move the logic from `connectedCallback()` to `renderedCallback()`.
- D. Move the logic to a getter/setter pair.

Correct Answer: D

QUESTION 4

Which statement is true regarding savepoints?

- A. Savepoints are not limited by DML statement governor limits
- B. You can roll back to any savepoint variable created in any order
- C. Static variables are not reverted during a rollback.
- D. Reference to savepoints can cross trigger invocations.

Correct Answer: C

QUESTION 5

A company has a Request__c object that has a lookup to the Opportunity object and a custom field.

Status__c, with values of Open, Closed, and Invalid. An Opportunity should not be allowed to be deleted if there are any Request__c records related to it that have a Status__c value of Open or Closed. what is the optimal way to enforce the

requirement to prevent deletion?

- A. A Process on Request__c
- B. A Process on Opportunity
- C. An Apex Trigger on Opportunity
- D. An Apex Trigger on Request__c

Correct Answer: C
