QUESTION 1

From the employee training portal, an employee opens a new Enrollment case, submits course selections, and receives an email confirmation. There is an error in the email confirmation. You must identify the cause of the error by recording a set of interactions on the portal and testing expected behavior on the data collection fields.

What three steps, when applied in combination, achieve the required testing? (Choose Three)

- A. Add stage-entry validations on the Enrollment case fields.
- B. Create a test case for the employee portal.
- C. Add assertions on the UI elements to verify correct data collection.
- D. Run a new Enrollment case from the employee training portal.
- E. Add field validations on the course selection step.

Correct Answer: ACD

QUESTION 2

Which issue do you address by simulating a data source?

- A. You need to test a save plan for a savable data page that updates the cost of coverage options for insurance policies.
- B. In production, the customer database needs to be taken off-line overnight for scheduled maintenance.
- C. The product database moves to a new data source accessible by a web service that is not yet configured.
- D. During staging, you need to access realistic customer data without exposing personally-identifying information to testers.

Correct Answer: D

QUESTION 3

A hotel booking application allows customers to change rooms after making a reservation. Each room's status in each hotel is stored on a data page sourced from an external database table. Which two configuration options, when applied in combination, do you use to update the database table when a customer changes rooms? (Choose Two)

- A. A savable data page that contains the room information
- B. A when rule to trigger the database update
- C. A data transform to copy updates to the data page
- D. An editable data page that contains the room information

Correct Answer: CD

QUESTION 4

In an application that sells office supplies, the Payment view displays order items and collects payment information. In the Payment section rule, the order items are grouped in a dynamic layout. You find out later that the Order Summary view must also display the order items.

How do you configure the UI so that the order items display is shared between the Payment view and Order Summary view?

- A. Convert the Payment section layout that contains order items to a section, and embed this section in the Order Summary section.
- B. Build the Order Summary section with a layout inside to group the order items, similar to the Payment section.
- C. Embed the Payment section in the Order Summary section.
- D. Reuse the Payment section in the Order Summary view and use a disable when condition to disable payment information on the Payment section rule.

Correct Answer: D

QUESTION 5

A developer is attempting to reference a validate rule called ValidateCustomer from a flow action applied to a case type class called ACME-IT-Work-Ticket. The case type class directly inherits from the Work- class. The case type class does not contain a ValidateCustomer validate rule.

Place the classes in the order in which Pega searches for the ValidateCustomer validate rule.

Select and Place:

Class Name	Search Order
ACME-IT-Work	
ACME-IT	
ACME	
Work-	
@baseclass	

Correct Answer:

Class Name

Search Order

ACME
ACME-IT
Work-
@baseclass
ACME-IT-Work
