QUESTION 1

You populate a data page with product information. The product information varies based on the Product ID.

Which implementation maximizes reusability?

- A. Create a data page and report definition for each context. Use parameters to filter the results of the response data transform.
- B. Create a data page sourced with a report definition. Circumstance the report definition based on context.
- C. Create a data page sourced with a connector. Specialize the data page by class based on context.
- D. Create a data page sources with a report definition. Use parameters to specify a filter condition to retrieve specific results based on the context.

Correct Answer: D

QUESTION 2

When creating a new ruleset version, what extra step must the system architect perform?

- A. There are no extra steps if the ruleset version is up-to-date.
- B. Change the decision table item numbers.
- C. Lock the ruleset to prevent automatic versioning.
- D. Rulesets cannot be versioned.

Correct Answer: A

QUESTION 3

A health plan application includes a process for surgical procedure requests. Currently, there is an evaluation subprocess in which a physician reviews the diagnosis and enters the recommended procedure and its urgency. The request then advances to a medical director who analyzes the feedback and approves the appropriate procedure. The health care organization has created a new requirement, which states that three physicians can perform the evaluation independently. Only two evaluations are necessary to advance the case to the medical director.

In order to allow the three physicians to review the orders in parallel, how would you configure the process?

- A. Add a Split Join shape, add a list of physicians, and call the surgical procedure request process.
- B. Add a Split For Each shape, add a list of physicians, and call the evaluation process.
- C. Add a Split Join shape, add a list of physicians, and call the evaluation process.
- D. Add a cascading approvals shape that is called by the evaluation subprocess.

Correct Answer: A

QUESTION 4

Which layer of the Enterprise Class Structure contains assets that cannot be reused in other applications?

- A. Implementation
- B. Division
- C. Organization
- D. Framework

Correct Answer: A

QUESTION 5

A duplicate case search contains two weighted conditions in which a property value in the current case is compared to the same property value in the existing case. After processing multiple cases that have two matching data values, duplicate case search does not identify any duplicates.

What two approaches do you take to diagnose the cause? (Choose two.)

- A. Verify that there are no more than 4 maximum weighted conditions being tested.
- B. Verify that the total weights of the matching conditions match or exceed the threshold.
- C. Verify that each of the basic conditions are satisfied.
- D. Verify that the case type is instantiated as a temporary case so the case can be cancelled.

Correct Answer: AB
