QUESTION 1

Candidate hiring decisions are based on the feedback from the interviewer and test scores. If necessary, other test scores are used in the evaluation. * Candidates with an assessment score of 40 or less are automatically rejected. * Candidates with an assessment score of 60 or less are rejected if either their technical skill score or their interpersonal skill score is below 40. * Candidates with assessment scores higher than 60 are automatically approved. You are using a decision tree to make the evaluations.

Which two branch configurations would you use in your decision tree? (Choose Two)

A. Two nested branches - one to evaluate technical skill scores and another to evaluate interpersonal skill scores.

B. An otherwise branch that tests for assessment scores less than 40.

C. A top-level branch that evaluates both technical and interpersonal skill scores.

D. A top-level branch that tests for assessment scores less than 40.

Correct Answer: AD

QUESTION 2

Your application is deployed to the cloud. A data source outside your application populates a data page by using your data access pattern configuration. You receive complaints that the system takes a long time to fetch data each time the case worker accesses information for a different customer.

Which approach solves this performance issue?

A. Move to local installation because network traffic in cloud deployment is often slow.

B. Change snapshot data access method to reference pattern data access method.

C. Fetch only the targeted data from the database each time data is needed so access is faster.

D. Access data page with a predefined key so that, once loaded, data access is faster.

Correct Answer: B

QUESTION 3

You create a report in a work class that displays the assigned operator and task name for each open case. Which two ways can you combine data in the Assign-Worklist class for your report? (Choose Two)

A. Use a class join to the Assign-Worklist class. Specify a join filter where the pxRefObjectKey in the join class is equal to an object identifier in the work class.

B. Use a Worklist Assignment association rule to join the Work class to the Assign-Worklist class.

C. Use a class join to the Assign-Worklist class. Specify a join filter where the Worklist Assignment association rule is equal to an object identifier in the work class.

D. Use a Worklist Assignment association rule to join to the Assign-Worklist class. Specify a join filter where the pxRefObjectKey in the join class is equal to an object identifier in the work class.

Correct Answer: AB

QUESTION 4

Which two configurations can you use to include access groups into your Product rule? (Choose two.)

A. Export the access groups using the Access Manager.

B. Add the access groups to the application record.

C. Add the access group to the Product record in the Individual instances to include section.

D. Associate the access groups with a ruleset included in the application.

Correct Answer: BD
