### QUESTION 1

You want operators in two separate units to be able to perform work routed to either unit. Which configuration supports this requirement?

- A. On each operator's record, associate the operator with both units.
- B. On each operator's record, associate the operator with the same work group.
- C. On the work group record, associate the operators with the work group.
- D. On each unit record, associate both operators with each unit.

Correct Answer: B

---

### QUESTION 2

You have identified an activity that does not perform well. You need to find out exactly what steps are causing the problem.

Which tool do you use?

- A. Pega Log Analyzer (PLA)
- B. Performance Profiler
- C. Database Trace
- D. Performance Analyzer (PAL)

Correct Answer: D

---

### QUESTION 3

Identify two options for passing data between a Pega application and a webpage containing a web mashup. (Choose two.)

- A. Use the attribute `data-pega-event-onpagedata`.
- B. Use REST methods to call Pega microservices.
- C. Call a Pega API function from the host server.
- D. Call the function `pega.web.api.doAction()`.

Correct Answer: AD

---

#### QUESTION 5

You are updating a system of record using a SOAP connector. If the system of record is unavailable, you want to retry after an hour. If it is still unavailable after an hour, a notification should be sent to a system administrator.

How do you implement this requirement?

- A. Customize the standard `pxErrorHandlingTemplate` data transform.
- B. Use a transition condition in the activity step invoking the connector.
- C. Implement the logic in the connector's error handler flow.
- D. Implement the logic in the data page's response data transform.

Correct Answer: C
