QUESTION 1

A company uses a Microsoft Excel sheet to manage its loan application process.

The company wants to optimize the process.

You need to discover inefficiencies in the process.

Solution: Record the actions required to complete the loan application process in the process advisor feature. Use task mining to discover inefficiencies in the process.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

Explanation:

Task mining is a technology that enables organizations to capture detailed steps for tasks performed on users' desktops, either independently or collaboratively with colleagues.

By analyzing recorded user actions, task mining allows organizations to gain insights into how they perform tasks, identify common mistakes made during task performance, and pinpoint tasks that can be automated, all of which can help

optimize their business processes.

Task mining is a powerful tool for streamlining workflows, identifying inefficiencies and bottlenecks in workflows, reducing costs, and fostering a culture of continuous improvement where employees are encouraged to optimize their work

processes.

QUESTION 2

A company plans to automate the expense approval process.

Users currently enter data into an on-premises SQL Server database.

You need to allow users to submit expenses from mobile devices.

Solution: Create a canvas app for expense data entry. Create a desktop flow. Create a cloud flow for approval and trigger the desktop flow to add data to the SQL Server database.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

Explanation:

Need an on-premises data gateway.

Correct solution: Create a canvas app for expense data entry. Install an on-premises gateway. Create a cloud flow for approval and to add data to the SQL Server database.

The on-premises data gateway acts as a bridge. It provides quick and secure data transfer between on-premises data, which is data that isn't in the cloud, and several Microsoft cloud services. These services include Power BI, Power Apps,

Power Automate, Azure Analysis Services, and Azure Logic Apps.

Power Automate is a service that you can use to automate repetitive tasks to bring efficiencies to any organizations. You can create cloud flows, desktop flows, or business process flows.

QUESTION 3

HOTSPOT

A company uses Dynamics 365 Sales and Power BI.

Sales managers must be able to keep track of changes to their pipeline in the following ways:

1.

Notify the sales managers when an Opportunity changes sales stage.

2.

Notify the sales managers when the pipeline drops below 2.5M USD.

3.

When reviewing the pipeline in Power BI, a sales executive must be able to add a Playbook to an Opportunity.

You need to recommend a solution that meets the company requirements.

Which combination of solutions should you recommend? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Notify the sales manager when an Opportunity changes sales stage.

Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector
Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 users
Microsoft Power Automate, data alerts, and Microsoft Office 365 connector

Notify the sales managers when the pipeline drops below 2.5 USD.

Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector
Microsoft Power Automate, Power BI data alerts, and Microsoft Office 365 connector
Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector

When reviewing the pipeline in Power BI, a sales executive must be able to add a Playbook to an Opportunity.

Power BI, Power Apps, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector
Microsoft Power Automate, Data alerts, Microsoft Dataverse connector, and Microsoft Office 365 users
Microsoft Power Automate, Data alerts, and Microsoft Office 365 connector
Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector

Correct Answer:

Answer Area

Notify the sales manager when an Opportunity changes sales stage.

Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector
Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 users
Microsoft Power Automate, data alerts, and Microsoft Office 365 connector

Notify the sales managers when the pipeline drops below 2.5 USD.

Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector
Microsoft Power Automate, Power BI data alerts, and Microsoft Office 365 connector
Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector

When reviewing the pipeline in Power BI, a sales executive must be able to add a Playbook to an Opportunity.

Power BI, Power Apps, Microsoft Dataverse connector, and Microsoft Office 365 Outlook connector
Microsoft Power Automate, Data alerts, Microsoft Dataverse connector, and Microsoft Office 365 users
Microsoft Power Automate, Data alerts, and Microsoft Office 365 connector
Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector

Box 1: Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft 365 Outlook connector Use Microsoft Dataverse as the data source.

While Power Automate is a robust tool with ever-expanding capabilities, it also handles simple tasks with grace. A universal business need for many organizations is the ability to automate email notifications based on certain criteria: an

opportunity is won, send an email to the sales manager; a case is closed, send an email to the customer; a work order is completed, send an email to the customer.

Power Automate can easily accommodate this using the Microsoft 365 Outlook connector.

Box 2: Microsoft Power Automate, Power Bi data alerts, and Microsoft 365 connector

Data alerts in the Power BI service: Set alerts to notify you when data in your dashboards changes beyond limits you set.

Box 3: Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector

QUESTION 4

HOTSPOT

You need to ensure that the solution meets the data security and compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Scenario

Relationship behavior

A worker transfers to a new client company.

	▼
Assign: Cascade All	
Assign: Cascade None	
Merge: Cascade All	
Rollup View: Cascade All	

A user deletes a worker's job placement history.

	▼
Delete: Cascade All	
Delete: Remove Link	
Delete: Restrict	

Correct Answer:

Answer Area

Scenario

Relationship behavior

A worker transfers to a new client company.

	▼
Assign: Cascade All	
Assign: Cascade None	
Merge: Cascade All	
Rollup View: Cascade All	

A user deletes a worker's job placement history.

	▼
Delete: Cascade All	
Delete: Remove Link	
Delete: Restrict	

Box 1: Assign: Cascade None

Scenario: Worker still records must be archived after ten years and are then removed from the main system.

Assign: The referenced table record owner is changed.

Cascade None: Do nothing.

Incorrect Answers:

Cascade All: Perform the action on all referencing table records associated with the referenced table record.

Box 2: Delete: Restrict

Scenario: Worker information must not be deleted from the system while skill and job placement history records for the worker exist in the system.

Referential, Restrict Delete: In a referential, restrict delete relationship between two tables, you can navigate to any related rows. Actions taken on the parent row will not be applied to the child row, but the parent row cannot be deleted while

the child row exists. This is useful if you do not want child rows to become orphaned. This forces the user to delete all of the children before deleting the parent.

QUESTION 5

HOTSPOT

A company is creating a Power Platform solution to manage employees.

The company has the following requirements:

Allow only the human resource manager to change an employee's employment status when an employee is dismissed.

Allow only approved device types to access the solution and company data.

You need to recommend a solution that meets the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Requirement

Configuration

Allow only the human resource manager to change an employee's employment status when an employee is dismissed.

Team access
Privacy preference
Field security profile
Hierarchy security profile

Allow only approved device types to access the solution and company data.

Endpoint security
Compliance policy
Conditional access
Mobile threat integration

Correct Answer:

Answer Area

Requirement

Allow only the human resource manager to change an employee's employment status when an employee is dismissed.

Allow only approved device types to access the solution and company data.

Configuration

The screenshot shows two configuration panels. The top panel, titled 'Team access', has a dropdown menu with four options: 'Team access', 'Privacy preference', 'Field security profile' (highlighted in green), and 'Hierarchy security profile'. The bottom panel, titled 'Endpoint security', has a dropdown menu with four options: 'Endpoint security', 'Compliance policy' (highlighted in green), 'Conditional access', and 'Mobile threat integration'.

Box 1: Field security profile

Record-level permissions are granted at the entity level, but you may have certain fields associated with an entity that contain data that is more sensitive than the other fields. For these situations, you use field-level security to control access to

specific fields.

Field-level security is available for the default fields on most out-of-box entities, custom fields, and custom fields on custom entities. Field-level security is managed by the security profiles.

Box 2: Compliance policy

Compliance policy settings – Tenant-wide settings that are like a built-in compliance policy that every device receives. Compliance policy settings set a baseline for how compliance policy works in your Intune environment, including whether

devices that haven't received any device compliance policies are compliant or noncompliant.

Note: Mobile device management (MDM) solutions like Intune can help protect organizational data by requiring users and devices to meet some requirements. In Intune, this feature is called compliance policies.

Compliance policies in Intune:

Define the rules and settings that users and devices must meet to be compliant.

Include actions that apply to devices that are noncompliant. Actions for noncompliance can alert users to the conditions of noncompliance and safeguard data on noncompliant devices.

Can be combined with Conditional Access, which can then block users and devices that don't meet the rules.
