QUESTION 1

A price sensitive customer wants to prevent attacks on a windows 2008 Virtual Server. The server will max out at 100Mbps but needs to have 45,000 sessions to connect to multiple hosts within a data center.

Which VM instance should be used to secure the network by this customer?

- A. VM-200
- B. VM-100
- C. VM-300
- D. VM-50

Correct Answer: D

QUESTION 2

Which two designs require virtual systems? (Choose two.)

- A. A shared gateway interface that does not need a full administrative boundary
- B. A virtual router as a replacement for an internet-facing router
- C. A single physical firewall shared by different organizations, each with unique traffic control needs
- D. A VMware NSX deployment that needs micro segmentation

Correct Answer: BC

QUESTION 3

An SE is preparing an SLR report for a school and wants to emphasize URL filtering capabilities because the school is concerned that its students are accessing inappropriate websites. The URL categories being chosen by default in the report are not highlighting these types of websites.

How should the SE show the customer the firewall can detect that these websites are being accessed?

- A. Remove unwanted categories listed under "High Risk" and use relevant information
- B. Create a footnote within the SLR generation tool
- C. Edit the Key-Findings text to list the other types of categories that may be of interest
- D. Produce the report and edit the PDF manually

Correct Answer: A

QUESTION 4
