100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Palo Alto Networks Official Exam Center

⚙ **Instant Download** After Purchase

⚙ **100% Money Back** Guarantee

⚙ **365 Days** Free Update

⚙ **800,000+** Satisfied Customers

QUESTION 1

How is traffic directed to a Palo Alto Networks firewall integrated with Cisco ACI?

A. by creating an access policy

B. through a policy-based redirect (PBR)

C. contracts between EPGs that send traffic to the firewall using a shared policy

D. through a virtual machine monitor (VMM) domain

Correct Answer: C

QUESTION 2

Whichthree deployment modes of VM-Series firewalls are supported across NSX-T? (Choose three)

A. Partner Service

B. Boot Strap

C. Prism Central

D. Tier-1 insertion

E. Tier-0 insertion

Correct Answer: ADE

https://docs.paloaltonetworks.com/vm-series/9-0/vm-series-deployment/set-up-the-vm-series-firewall-onnsx/set-up-the-vm-series-firewall-on-nsx-t/supported-deployments-of-the-vm-series-firewall-on-vmwarensx-t.html
You can deploy one or more instances of the VM-Series firewall as a partner service in your VMware NSXT Data Center. Attach a VM-Series firewall to any tier-0 or tier-1 logical router to protect north-south traffic. You can deploy the VM-Series firewall as standalone service instance or two firewalls in a high-availability (HA) pair. Panorama manages the connection with NSX-T Manager and the VM-Series firewalls deployed in your NSX-T software-defined datacenter. Tier-0 Insertion--Tier-0 insertion deploys a VM-Series firewall to a tier-0 logical router, which processes traffic between logical and physical networks. When you deploy the VM-Series firewall with tier-0 insertion, NSX-T Manager uses the deployment information you configured on Panorama to attach a firewall to a tier-0 logical router in virtual wire mode. Tier-1 Insertion--Tier-1 insertion deploys a VM-Series firewall to a tier-1 logical router, which provides downlink connections to segments and uplink connection to tier-0 logical routers. NSX-T Manager attaches VM-Series firewalls deployed with tier-1 insertions to a tier-1 logical router in virtual wire mode. After deploying the firewall, you configure traffic redirection rules that send traffic to the VM-Series firewall when crossing a tier-0 or tier-1 router. Security policy rules that you configure on Panorama are pushed to managed VM-Series firewalls and then applied to traffic passing through the firewall.

QUESTION 3

Which two methods provide a virtual IP address when implementing active/active HA? (Choose two)

A. VRRP

B. HSRP

C. floating IP address

D. ARP load sharing

Correct Answer: CD

QUESTION 4

Which two options describe use cases of internal and external tags in Panorama? (Choose two)

A. device group membership

B. template membership

C. Dynamic Address Group membership

D. rule grouping

Correct Answer: AC

QUESTION 5

What are the benefits of NSX-V?

A. supports the Data Plane Development Kit (DPDK) libraries; enables Stackdnver Monitoring on the VMware Series Firewall, works with Cloud Launcher

B. virt-manager wizard to help with the installation process; virsh command to deploy the VM-Series; virtinstallcommand to install

C. sturdier centralized management; automated deployment ease in administering tenants and dedicated compute infrastructure; tighter integration between virtual environment and security enforcement of dynamic security

D. leverages Prism Central

Correct Answer: A
