QUESTION 1

Which of the following statements is true? Select the correct answer.

- A. WS-ReliableMessaging standardizes reliability levels associated with databases required to persist state data.
- B. WS-ReliableMessaging standardizes the issuance and delivery of positive and negative acknowledgement messages.
- C. WS-ReliableMessaging standardizes SOAP headers related to atomic transactions with rollback features.
- D. WS-ReliableMessaging standardizes the expression of service composition logic, but only for SOAP-based Web services.

Correct Answer: B

QUESTION 2

Which of the following statements make sense? SELECT ALL THAT APPLY

- A. I have 3 SOAP-based Web services, each with its own individual service contract.
- B. I have 3 REST services, all of which share the same uniform contract.
- C. I have 3 SOAP-based Web services, each with its own uniform contract.
- D. I have 3 REST services, each of which is designed to be accessed via the same set of HTTP methods.

Correct Answer: ABD

QUESTION 3

Orchestration is most commonly associated with which industry standard? Select the correct answer.

- A. WS-Addressing
- B. XML Schema
- C. WS-BPEL
- D. WS-Policy

Correct Answer: C

QUESTION 4

Which of the following statements is true? Select the correct answer.

- A. Individual service contracts do not need to be published for SOAP-based Web services. Instead, they use a uniform

contract.

B. Individual service contracts do not need to be published for REST services. Instead, they use a common uniform contract.

C. Components provide published contracts, but when building services as components, components must use a uniform contract instead.

D. None of these statements are true.

Correct Answer: B

QUESTION 5

Which of the following statements is true? Select the correct answer.

A. One way in which REST services are different from components is that components each expose their own technical interface (or technical contract), whereas REST services share a single uniform contract.

B. One way in which REST services are different from components is that components typically exchange data using HTTP, whereas REST services typically exchange data using binary protocols.

C. One way in which REST services are different from components is that components cannot themselves become services. Instead, components are used by services, such as REST services.

D. One way in which REST services are different from components is that components cannot exchange data remotely (across server boundaries), whereas REST services are designed to be distributed.

Correct Answer: A
