QUESTION 1

Two services need to exchange a business document that exists as an XML document. Each service\\'s contract uses a different XML schema to represent the business document structure. This results in two different XML representations for the same business data. Which of the following patterns can be used to enable the exchange of the business document between these two services?

A. Data Format Transformation

B. Protocol Bridging

C. Atomic Service Transaction

D. Data Model Transformation

Correct Answer: D

QUESTION 2

The Process Abstraction pattern can help solve which of the following problems?

A. When business process logic is physically distributed across independent service implementations, it can be difficult to extend and evolve due to its decentralized nature.

B. The same business rules may exist within different business-centric services, leading to redundancy issues and governance problems due to the challenge of maintaining consistent rule logic within multiple services as rules changes over time.

C. Grouping non-agnostic business logic together with agnostic business logic hinders the governance of the non-agnostic logic and the reuse of the agnostic logic.

D. Bundling both messaging and validation logic into the same service eventually results in the creation of redundant logic across multiple services, thereby causing performance challenges.

Correct Answer: C
