QUESTION 1

A service architecture is most comparable in scope to a traditional:

A. component architecture

B. integration architecture

C. application architecture

D. None of the above.

Correct Answer: A

QUESTION 2

A service fa?ade component can be used to abstract the part of a service architecture that has negative coupling potential.

A. True

B. False

Correct Answer: A

QUESTION 3

Which of the following statements are false?

A. Using the Reliable Messaging pattern can improve the quality of messaging-based communication.

B. The Reliable Messaging pattern is applied to databases, not services.

C. The Reliable Messaging pattern is one of the patterns that can be associated with the Enterprise Service Bus compound pattern.

D. The Reliable Messaging pattern is always applied together with the Atomic Service Transaction pattern.

Correct Answer: BD

QUESTION 4

If a service consumer program needs to get data from a service that is not available, it can poll the service by periodically issuing a request message. This type of interaction can be inefficient because it can lead to unnecessary message transmissions. Which of the following statements describes a solution to this problem?

A. By applying the Messaging Metadata pattern, the service consumer can write a request identifier in the message header. Service agents then intercept the request messages and do not forward those that contain a previously detected identifier. This practice eliminates the delivery of the duplicate messages to the service.

B. The Event-Driven Messaging pattern can be applied to establish a messaging framework in which service consumers are automatically notified of relevant runtime service events.

C. By applying the Atomic Service Transaction pattern, a service can be designed to invoke an alternative exception handling process when it is unavailable to receive a given message.

D. None ofthesestatements describe solutions that directly solve this problem.

Correct Answer: B

QUESTION 5

When applying the Messaging Metadata pattern, it is customary to place business document data in the message header and supplementary messaging metadata in the message body.

A. True

B. False

Correct Answer: B
