### QUESTION 1

James is training for the cross-country team. As part of his training he does a set of pushups for a minute every day. Over the past 3 days, he did 43, 40, and 45 pushups in these one-minute sessions.

On the 4th day, what is the minimum number of pushups he must do in order to increase his average?

- A. 43
- B. 46
- C. 45
- D. 42

Correct Answer: A

---

### QUESTION 2

Which of these sentences does not use standard capitalization?

- A. Although she was invited, Alana claimed she was "way too busy" to join us for coffee.
- B. Sarah asked, "Where are we going tonight after the movie?"
- C. Harry applied to start college in the spring, as he planned to take a "gap semester" in the fall after his high school graduation.
- D. Traveling from Alaska to Argentina on a motorcycle: this was the trip he had waited his whole life to take.

Correct Answer: D

---

### QUESTION 3

Which of these expressions is a factor of  $8x^3 - 125$ ?

- A.  $4x^2 - 10x + 25$
- B.  $4x - 25$
- C.  $2x^2 + 25$
- D.  $2x - 5$

- A. Option A
- B. Option B
- C. Option C

D. Option D

Correct Answer: D

---

#### QUESTION 4

Choose an expression that is equivalent to  $\sqrt{3^8}$ .

- A.  $3\frac{1}{4}$
- B.  $3^3$
- C.  $3^4$
- D.  $3^6$

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: C

---

#### QUESTION 5

Read the paragraph attached.

Teeth Grinding Can Be A Real Headache

Did you know that if you suffer from nagging headaches ?including migraines, tension headaches and behind-the-eye pain ?your teeth could be the root of your problem? Involuntary and excessive clenching and grinding of the teeth (known

in medical terms as bruxism) is a common condition, so prevalent that it affects 1 in 5 adults in the U.S. And this number continues to increase. It\'s probably no surprise to learn that bruxism can result in significant tooth wear and enamel

erosion, leading to tooth surface sensitivity, chipped and fractured teeth, as well as a host of other dental issues that may require expensive treatment. But, what you may not realize is that over 90 percent of bruxism sufferers also experience

headache pain caused by their teeth grinding. If you think about it, the link between teeth and jaw clenching, and headaches caused by teeth grinding, makes a lot of sense. Because the jaw is capable of exerting more than 250 pounds of

force when clenching, this amount of force can crack a walnut. This extreme tooth-on-tooth force helps explain tooth

wear caused by teeth grinding and may also lead to temporomandibular joint (TMJ) pain and potential TMJ issues from teeth

grinding. The temporomandibular joints are flexible joints found on each side of your head in front of the ear. Responsible for all jaw movements including eating and talking, they are the most active joints in your body and thus endure a lot of

wear and tear. They connect the lower jaw to the temporal bone of the skull. Excessive teeth clenching and grinding, which generally occurs during sleep, puts pressure on these joints and as a result can cause far-reaching pain in your

temples, behind the eyes, in the back of your neck and through your cheeks and ears. The exact cause of bruxism is not known, but it is widely believed that stress is a primary trigger and once the stressful event has passed, the clenching

and grinding usually subsides. However, the amount of damage and tooth wear caused by teeth grinding that can be done within a brief period can be significant. That is why it is so important that you seek treatment once you realize you are

a teeth grinder, not only to stop your nagging headache pain, but also to prevent any further damage to your teeth. While there is no medication currently available to treat bruxism, dental experts recommend wearing a dental grind guard to

protect the teeth from further damage and potentially help alleviate TMJ pain.

Which of these claims does the attached paragraph support?

Claim 1: Teeth grinding can lead to long-term tooth damage.

Claim 2: Excessive teeth clenching and grinding is often done unconsciously and without realizing what is happening.

Claim 3: Brushing teeth daily with a fluoride-enhanced toothpaste can help fight the damaging effects of bruxism.

Claim 4: TMJ pain is manageable once its origins have been identified, but once a person has TMJ issues, they cannot be cured and there will be persistent issues.

Claim 5: Headache pain may be linked to your jaw and teeth.

Claim 6: The temporomandibular joint is the joint most prone to injury in the body because of the frequency of use.

A. claims 1, 3, and 6

B. claims 1, 2, and 5

C. claims 2, 4, and 5

D. claims 3, 4, and 6

Correct Answer: B
