QUESTION 1

You have an Azure subscription that contains the resources shown in the following table.

Name	Type
Group1	Group that has the Assigned membership type
App1	Enterprise application in Azure Active Directory (Azure AD)
Contributor	Azure subscription role
Role1	Azure Active Directory (Azure AD) role

For which resources can you create an access review?

- A. Group1, App1, Contributor, and Role1
- B. Hotel and Contributor only
- C. Group1, Role1, and Contributor only
- D. Group1 only

Correct Answer: A

Access reviews require an Azure AD Premium P2 license.

Access reviews for Group1 and App1 can be configured in Azure AD Access Reviews.

Access reviews for the Contributor role and Role1 would need to be configured in Privileged Identity Management (PIM). PIM is included in Azure AD Premium P2.

QUESTION 2

HOTSPOT

You have a Microsoft 365 tenant.

You need to identify users who have leaked credentials. The solution must meet the following requirements.

1.

Identify sign-ins by users who are suspected of having leaked credentials.

2.

Tag the sign-ins as a high risk event.

3.

Immediately enforce a control to mitigate the risk, while still allowing the user to access applications.

What should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Hot Area:

To classify leaked credentials as high-risk, use:

Azure Active Directory (Azure AD) Identity Protection
Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
Identity Governance
Self-service password reset (SSPR)

To trigger remediation, use:

Client apps not using Modern authentication
Device state
Sign-in risk
User location
User risk

To mitigate the risk, select:

Apply app enforced restrictions
Block access
Grant access but require app protection policy
Grant access but require password change

Correct Answer:

To classify leaked credentials as high-risk, use:

Azure Active Directory (Azure AD) Identity Protection
Azure Active Directory (Azure AD) Privileged Identity Management (PIM)
Identity Governance
Self-service password reset (SSPR)

To trigger remediation, use:

Client apps not using Modern authentication
Device state
Sign-in risk
User location
User risk

To mitigate the risk, select:

Apply app enforced restrictions
Block access
Grant access but require app protection policy
Grant access but require password change

QUESTION 3

You create a conditional access policy that blocks access when a user triggers a high-severity sign-in alert. You need to test the policy under the following conditions:

1.

A user signs in from another country.

2.

A user triggers a sign-in risk. What should you use to complete the test?

A. the Conditional Access What If tool

B. sign-ins logs in Azure Active Directory (Azure AD)

C. the activity logs in Microsoft Defender for Cloud Apps

D. access reviews in Azure Active Directory (Azure AD)

Correct Answer: A

QUESTION 4

You have a Microsoft 365 tenant.

All users must use the Microsoft Authenticator app for multi-factor authentication (MFA) when accessing Microsoft 365 services.

Some users report that they received an MFA prompt on their Microsoft Authenticator app without initiating a sign-in request.

You need to block the users automatically when they report an MFA request that they did not initiate.

Solution: From the Azure portal, you configure the Account lockout settings for multi-factor authentication (MFA).

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

You need to configure the fraud alert settings.

Reference: <https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-mfasettings>

QUESTION 5

You create a Log Analytics workspace.

You need to implement the technical requirements for auditing.

What should you configure in Azure AD?

- A. Company branding
- B. Diagnostics settings
- C. External Identities
- D. App registrations

Correct Answer: B
