QUESTION 1

You have a Microsoft OneDrive for Business folder that contains the files shown in the following table.

Type	Number of files
.jpg	50
.docx	300
.txt	50
.zip	20

In Microsoft Cloud App Security, you create a file policy to automatically apply a classification. What is the effect of applying the policy?

- A. The policy will apply to only the .docx and .txt files. The policy will classify the files within 24 hours.
- B. The policy will apply to all the files. The policy will classify only 100 files daily.
- C. The policy will apply to only the .docx files. The policy will classify only 100 files daily.
- D. The policy will apply to only the .docx and .txt files. The policy will classify the files immediately.

Correct Answer: C

QUESTION 2

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

**Statements****Yes****No**

Microsoft Secure Score in the Microsoft 365 security center can provide recommendations for Microsoft Cloud App Security.

☐☐

From the Microsoft 365 security center, you can view how your Microsoft Secure Score compares to the score of organizations like yours.

☐☐

Microsoft Secure Score in the Microsoft 365 security center gives you points if you address the improvement action by using a third-party application or software.

☐☐

Correct Answer:

Statements**Yes****No**

Microsoft Secure Score in the Microsoft 365 security center can provide recommendations for Microsoft Cloud App Security.

☒☐

From the Microsoft 365 security center, you can view how your Microsoft Secure Score compares to the score of organizations like yours.

☒☐

Microsoft Secure Score in the Microsoft 365 security center gives you points if you address the improvement action by using a third-party application or software.

☒☐

QUESTION 3**HOTSPOT**

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
Conditional access policies can use the device state as a signal.	<input type="radio"/>	<input type="radio"/>
Conditional access policies apply before first-factor authentication is complete.	<input type="radio"/>	<input type="radio"/>
Conditional access policies can trigger multi-factor authentication (MFA) if a user attempts to access a specific application.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Statements	Yes	No
Conditional access policies can use the device state as a signal.	<input checked="" type="radio"/>	<input type="radio"/>
Conditional access policies apply before first-factor authentication is complete.	<input type="radio"/>	<input checked="" type="radio"/>
Conditional access policies can trigger multi-factor authentication (MFA) if a user attempts to access a specific application.	<input checked="" type="radio"/>	<input type="radio"/>

Box 1: Yes

Box 2: No

Conditional Access policies are enforced after first-factor authentication is completed.

Box 3: Yes

QUESTION 4

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
You can use Advanced Audit in Microsoft 365 to view billing details.	<input type="radio"/>	<input type="radio"/>
You can use Advanced Audit in Microsoft 365 to view the contents of an email message.	<input type="radio"/>	<input type="radio"/>
You can use Advanced Audit in Microsoft 365 to identify when a user uses the search bar in Outlook on the web to search for items in a mailbox.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Statements	Yes	No
You can use Advanced Audit in Microsoft 365 to view billing details.	<input type="radio"/>	<input checked="" type="radio"/>
You can use Advanced Audit in Microsoft 365 to view the contents of an email message.	<input type="radio"/>	<input checked="" type="radio"/>
You can use Advanced Audit in Microsoft 365 to identify when a user uses the search bar in Outlook on the web to search for items in a mailbox.	<input checked="" type="radio"/>	<input type="radio"/>

Box 1: No Advanced Audit helps organizations to conduct forensic and compliance investigations by increasing audit log retention.

Box 2: No

Box 3: Yes Reference: <https://docs.microsoft.com/en-us/microsoft-365/compliance/advanced-audit?view=o365-worldwide>

QUESTION 5

DRAG DROP

Match the Microsoft Purview Insider Risk Management workflow step to the appropriate task.

To answer, drag the appropriate step from the column on the left to its task on the right. Each step may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Steps

Answer Area

Correct Answer:

Steps

Answer Area

Box 1: Triage

New user activities that need investigation automatically generate alerts that are assigned a Needs review status. Reviewers can quickly identify and review, evaluate, and triage these alerts.

Alerts are resolved by opening a new case, assigning the alert to an existing case, or dismissing the alert. Using alert filters, it's easy to quickly identify alerts by status, severity, or time detected. As part of the triage process, reviewers can

view alert details for the activities identified by the policy, view user activity associated with the policy match, see the severity of the alert, and review user profile information.

Box 2: Investigate

Investigate

Quickly investigate all activities for a selected user with User activity reports (preview). These reports allow investigators in your organization to examine activities for specific users for a defined time period without having to assign them

temporarily or explicitly to an insider risk management policy. After examining activities for a user, investigators can dismiss individual activities as benign, share or email a link to the report with other investigators, or choose to assign the user

temporarily or explicitly to an insider risk management policy.

Cases are created for alerts that require deeper review and investigation of the activity details and circumstances around the policy match.

Box 3: Action

After cases are investigated, reviewers can quickly act to resolve the case or collaborate with other risk stakeholders in your organization. If users accidentally or inadvertently violate policy conditions, a simple reminder notice can be sent to

the user from notice templates you can customize for your organization. These notices may serve as simple reminders or may direct the user to refresher training or guidance to help prevent future risky behavior.
