QUESTION 1

A Splunk architect has inherited the Splunk deployment at Buttercup Games and end users are complaining that the events are inconsistently formatted for a web sourcetype. Further investigation reveals that not all web logs flow through the same infrastructure: some of the data goes through heavy forwarders and some of the forwarders are managed by another department. Which of the following items might be the cause for this issue?

- A. The search head may have different configurations than the indexers.
- B. The data inputs are not properly configured across all the forwarders.
- C. The indexers may have different configurations than the heavy forwarders.
- D. The forwarders managed by the other department are an older version than the rest.

Correct Answer: D

QUESTION 2

Which command will permanently decommission a peer node operating in an indexer cluster?

- A. splunk stop -f
- B. splunk offline -f
- C. splunk offline --enforce-counts
- D. splunk decommission --enforce counts

Correct Answer: C

Reference: <https://docs.splunk.com/Documentation/Splunk/7.3.2/Indexer/Takeapeeroffline>

QUESTION 3

Which search head cluster component is responsible for pushing knowledge bundles to search peers, replicating configuration changes to search head cluster members, and scheduling jobs across the search head cluster?

- A. Master
- B. Captain
- C. Deployer
- D. Deployment server

Correct Answer: B

Reference: <https://docs.splunk.com/Documentation/Splunk/7.3.2/DistSearch/SHCarchitecture>

QUESTION 4

When Splunk is installed, where are the internal indexes stored by default?

- A. SPLUNK_HOME/bin
- B. SPLUNK_HOME/var/lib
- C. SPLUNK_HOME/var/run
- D. SPLUNK_HOME/etc/system/default

Correct Answer: B

Reference: <https://answers.splunk.com/answers/3806/where-does-splunk-store-the-logs.html>

QUESTION 5

What is a Splunk Job? (Select all that apply.)

- A. A user-defined Splunk capability.
- B. Searches that are subjected to some usage quota.
- C. A search process kicked off via a report or an alert.
- D. A child OS process manifested from the splunkd process.

Correct Answer: A
