QUESTION 1

An organization is moving away from the use of client-side and server-side certificates for EAR The company would like for the new EAP solution to have the ability to detect rogue access points. Which of the following would accomplish these requirements?

A. PEAP

B. EAP-FAST

C. EAP-TLS

D. EAP-TTLS

Correct Answer: B

QUESTION 2

A security analyst is concerned about traffic initiated to the dark web form the corporate LAN. Which of the following networks should the analyst monitor?

A. SFTP

B. AS

C. Tor

D. LoC

Correct Answer: C

TOR is a dark web browser

QUESTION 3

A security administrator is integrating several segments onto a single network. One of the segments, which includes legacy devices, presents a significant amount of risk to the network.

Which of the following would allow users to access to the legacy devices without compromising the security of the entire network?

A. NIDS

B. MAC filtering

C. Jump server

D. IPSec

E. NAT gateway

Correct Answer: C

A jump server is a device that acts as an intermediary between users and other devices on a network. A jump server can provide a secure and controlled access point to the legacy devices without exposing them directly to the network. A jump server can also enforce authentication, authorization, logging, and auditing policies.

QUESTION 4

A company is moving to new location. The systems administrator has provided the following server room requirements to the facilities staff:

Consistent power levels in case of brownouts or voltage spikes A minimum of 30 minutes runtime following a power outage Ability to trigger graceful shutdowns of critical systems

Which of the following would BEST meet the requirements?

A. Maintaining a standby, gas-powered generator.

B. Using large surge suppressors on computer equipment.

C. Configuring managed PDUs to monitor power levels.

D. Deploying an appropriately sized, network-connected UPS device.

Correct Answer: D

QUESTION 5

A security administrator needs to create a RAID configuration that is focused on high read/write speeds and fault tolerance. It is unlikely that multiple drives will fail simultaneously. Which of the following RAID configurations should the administrator use?

A. RA1D 0

B. RAID1

C. RAID 5

D. RAID 10

Correct Answer: D

RAID 0 - no fault tollerance/ high write speed RAID 1 - low write speed RAID 5 - low write speed RAID 10 - fault tolerance of RAID 1 + high speed of RAID 0
