QUESTION 1

A developer is creating an automation project which processes personal information of employees.

To protect sensitive information that is logged during the execution of the automation at the Verbose level, how can the developer avoid logging variable and argument values in both Orchestrator and Studio?

- A. Store all sensitive information in an Excel file that the process can access.
- B. Check the Isolated property when invoking a workflow with sensitive information.
- C. Ensure all personal information variables are of the SecureString variable type.
- D. Check the Private property on the activities that contain sensitive information.

Correct Answer: B

QUESTION 2

During the development of a process, a certain label text must be retrieved. After retrieving the text, a button must be clicked and the following occurs:

1.

The loading of the label text element takes longer than 30 seconds.

2.

The loading of the button takes longer than 30 seconds.

3.

The retrieving of the data or clicking the button must be tried until successful.

Based on UiPath best practices, what must the developer use to ensure that an error is thrown if the label text or the button element does not load?

- A. Use the Get Text activity with the default timeout and set the ContinueOnError property to "True". Use the Click activity in the Retry Scope activity.
- B. Use the Get Text activity with the default properties in a Retry Scope activity. Use the Click activity with the default properties in a Retry Scope activity.
- C. Modify the Get Text activity by increasing the timeout property. Use the Click activity to click the button with the default settings.
- D. Use the Get Text activity with the default timeout and set the WaitForReady property to "None" in a Retry Scope activity. Modify the Click activity by increasing the timeout property and set the ContinueOnError property to "True".

Correct Answer: B

QUESTION 3

A developer created a project that contains a flowchart. The developer received a change request from the business as follows:

1.
If the Invoice Number contains special characters, the robot must remove them and then continue the process.

2.
If the Invoice Number contains only digits, do not change anything, keep the existing logic.

In order to add the new requirement, which activity should the developer use in the flowchart based on UiPath best practices?

- A. Flow Decision
- B. Else If
- C. Flow Switch
- D. If

Correct Answer: A

QUESTION 4

A Business Exception occurs in an isolated workflow. What exception is returned to the outer workflow?

- A. A NullReference Exception
- B. A Business Exception
- C. No exception is returned
- D. A System Exception

Correct Answer: D

Business Exceptions are not supported in an isolated workflow, all exceptions return as System Exceptions.

QUESTION 5

When is it recommended to use Desktop recording?

- A. When you automate Citrix Applications
- B. When you automate more steps in the same window

C. When you automate one step

D. When you automate Web pages

Correct Answer: B
