QUESTION 1

An administrator is creating a pool of desktops for a group of developers. The administrator needs to provide control to a user from the group to manage the recompose and refresh operations. The user's controls must apply only to the developer pool.

What should the administrator do?

- A. Create a developer folder, add the developer pool, and assign a user with the Inventory Administrators role to the folder.
- B. Create the developer pool and assign the Manage Desktops global privilege to the virtual desktops.
- C. Create the developer pool and assign the Inventory Control global privilege to the virtual desktops.
- D. Create a developer folder, add the desktops, and assign a user with the Manage Desktops role to the folder.

Correct Answer: A

QUESTION 2

An administrator is migrating from vSphere 4.x to vSphere 5.5 and has purchased new ESXi hosts with NVIDIA GRID-based graphics hardware.

Which two steps should the administrator take to allow virtual desktops to take advantage of the new graphics hardware? (Choose two.)

- A. Use the vSphere Client to upgrade the virtual machine hardware to version 10.
- B. Use the vSphere Web Client to upgrade the virtual machine hardware to version 10.
- C. In the pool settings area, set Allow Users to Choose Protocol to Yes.
- D. In the pool settings area set Allow Users to Choose Protocol to No.

Correct Answer: BD

QUESTION 3

An administrator needs to create a new pool of desktops to support a team of eight design engineers. Virtual Dedicated Graphics Acceleration (vDGA) will be used to provide hardware GPU resources. Four physical GPUs are available for direct mapping to virtual machines.

Which type of pool should the administrator create?

- A. Dedicated Assignment Automated Linked-Clone Pool
- B. Floating Assignment Automated Full-Clone Pool

- C. Floating Assignment Manual Pool
- D. Dedicated Assignment Manual Pool

Correct Answer: C

QUESTION 4

An administrator in a large organization needs to delegate authority to manage a group of desktops to another administrator at a remote site. The desktops have been placed in a folder in View Administrator so that a user can be assigned to manage those desktops only.

The remote site administrator must be able to:

What is the most restrictive predefined role that can be assigned to meet these requirements?

- A. Administrators
- B. Agent Registration Administrators
- C. Global Configuration and Policy Administrators
- D. Inventory Administrators

Correct Answer: D

QUESTION 5

Refer to the exhibit.

Processors	
General	
Model	Intel(R) Core(TM) i7-3740QM CPU @ 2.70GHz
Processor Speed	2.7 GHz
Processor Sockets	2
Processor Cores per Socket	1
Logical Processors	2
Hyperthreading	N/A

Which two statements below could explain why the vSphere Client is reporting N/A for hyperthreading? (Choose two.)

- A. The physical CPUs in the host do not support hyperthreading.
- B. Hyperthreading is disabled in the host's BIOS.
- C. The physical CPUs in the host are not multi-core.

D. The number of CPUs meets or exceeds the maximum without hyperthreading.

Correct Answer: AB
