### QUESTION 1

A virtual machine has the following configuration:

What is the behavior of the virtual machine when it encounters an out-of-space condition?

- A. It is suspended.
- B. It is gracefully shut down.
- C. It is powered off.
- D. It is converted to space-efficient sparse.

Correct Answer: A

---

### QUESTION 2

An administrator is configuring Kiosk mode in View. The administrator completes the following tasks: When the clients are tested they do not automatically log in after connecting to the Connection Server. What is causing this issue?

- A. The Kiosk mode user account was not added to the Connection Server to which the client is connecting.
- B. The Connection Server to which the client is connecting has not been enabled for Kiosk mode clients.
- C. The Kiosk mode user account was created in the wrong Organizational Unit.
- D. The View Client machine has not been enabled for Kiosk mode using the client registry settings.

Correct Answer: B

---

### QUESTION 3

A customer needs a datastore to be seen across multiple vSphere clusters with applications inside of the virtual machines that must detect the physical characteristics of the storage device.

Which type of virtual disk meets this requirement?

- A. A virtual disk on a VMFS datastore
- B. A raw device mapped disk in virtual compatibility mode
- C. A raw device mapped disk in physical compatibility mode
- D. A virtual disk on an NFS datastore

Correct Answer: C

---

### QUESTION 4

Which two actions will allow the administrator to deliver two applications that have conflicting Java requirements? (Choose two.)

- A. Package the application with ThinApp.
- B. Create two separate RDS farms to host the applications.
- C. Install the older version of Java and then upgrade to the latest required version.
- D. Create a Mirage application layer for each application and add both layers to each server in the RDS farm.

Correct Answer: AB

---

#### QUESTION 5

An administrator experiences a system failure on the vCenter Server during a Linked-Clone recompose operation.

Which two methods should the administrator use to resolve the unsuccessful recompose operation? (Choose two.)

- A. Select a new snapshot and then recompose once more.
- B. Delete the failed snapshot and then recompose once more.
- C. Delete the failed snapshot, create a new snapshot, and then recompose once more.
- D. Select the snapshot that was used in the last successful recomposition and then recompose once more.

Correct Answer: AD
