QUESTION 1

Which command can an administrator run to test and analyze connections between master servers, media servers, and clients for multiple NetBackup ports?

A. bperror

B. bpconfig

C. bpresolver

D. bptestnetconn

Correct Answer: D

QUESTION 2

Weekly full backups run for clientA on master1 using a storage unit that belongs to media1. The administrator is required to retain clientA\\'S full backups for a period of four months. When the administrator modifies the full schedule, an option for 4 months is missing from the Retention drop-down list.

How can the administrator add a four-month retention?

A. modify an existing retention level in the mater server host properties, under Retention Periods

B. ignore the selection list and type in the desired retention period directly

C. add a new retention period in the media server host properties, under Retention Periods

D. increase the Image cleanup interval in the master server host properties, under Clean-up

Correct Answer: C

QUESTION 3

Upon arriving at work on a Monday, an administrator sees several replication jobs that have failed with the

following error message:

no images were successfully processed

Which two reasons may be the cause for the error code? (Select two.)

A. The checkpoint restart is disabled for the replication jobs.

B. There are network connectivity issues between the source and target domains.

C. The NetBackup host ID-based certificate was revoked.

D. There is insufficient storage space on the target storage server.

E. There are insufficient tapes in the replication volume pool.

Correct Answer: AB

QUESTION 4

A NetBackup master server has commenced writing four long-running duplication jobs to an AdvancedDisk disk pool. The value of Maximum concurrent jobs for the storage unit and Limit I/O streams fir the disk pool are both set to 4. There are 35 jobs queued on the master server that require this disk pool: 5 replication jobs with priority 9999 10 backup jobs with priority 999 20 duplication jobs with priority 99 Two restore jobs that require this disk pool are then submitted with default priority.

Which job type goes active next?

A. Backup

B. Duplication

C. Replication

D. Restore

Correct Answer: D

QUESTION 5

An administrator wishes to modify the Override default job priority option for an MS-Windows type restore job before the restore job begins.

Where in the Microsoft Windows Backup, Archive, and Restore console can the administrator configure this option?

A. after clicking the Restore button, in the Restore Marked Files dialog box

B. at the bottom of the options listed in File> NetBackup Client Properties> Network

C. in the Backup, Archive, and Restore window, under the Restore Files tab

D. within File> Specify NetBackup Machines and Policy Type

Correct Answer: A
