QUESTION 1

An administrator took Media Server, mediaA, offline for maintenance and set up a new Media Server, mediaB, with access to the previously backed up data. When restores are performed for data that was backed up by mediaA, the restores fail.

Which setting in the Host Properties must the administrator modify to allow successful restores?

- A. From the Master Server, run the bpimage command to change the name of the Media Server from mediaA to mediaB.
- B. Verify both Media Servers are set up in the Media Server Host Properties > Restore Failover section.
- C. In the BAR GUI, change the "Server to use for backup and restores" setting to MediaB.
- D. Verify both Media Servers are set up in the Master Server Host Properties > Restore Failover section.

Correct Answer: A

QUESTION 2

What are two possible causes for job failure when a Windows policy is configured to use Accelerator? (Select two.)

- A. client-side deduplication is disabled
- B. use of the NTFS Change Journal is disabled
