QUESTION 1

Which step must an administrator complete prior to configuring a new NBU-Catalog policy?

- A. log in as the Systems Administrator.
- B. set an encryption passphrase for disaster recovery packages.
- C. create an email alias for recovery purposes.
- D. set up a Vault Policy for catalog backup.

Correct Answer: B

QUESTION 2

What is a possible cause for job failure when a Windows client is configured to use NetBackup Accelerator writing to an MSDP pool?

- A. "Disable client-side deduplication" is set on the policy.
- B. Use of the NTFS or ReFS Change Journal is disabled.
- C. There is insufficient space in the client's NetBackup installation directory.
- D. The policy lacks a schedule with "Accelerator forced rescan" enabled.

Correct Answer: C

QUESTION 3

An administrator is attempting to start NetBackup services on a master server without success. When verifying the database is up using the `nbdb_ping` command, the administrator receives the following error:

Database [NBDB] is not available

Which log file should the administrator analyze to determine why NetBackup Database fails to start?

- A. `nbdb.log`
- B. `nbdbms.log`
- C. `emm.log`
- D. `server.log`

Correct Answer: A

QUESTION 4

What is a logical destination for NetBackup client's backup data?

- A. Selection List
- B. Storage Unit
- C. Policy
- D. Catalog

Correct Answer: B

The logical destinations for a NetBackup client's data include storage units, storage unit groups, and SLP.

QUESTION 5

To support spanning backups in basic disk storage unit groups, what needs to be performed?

- A. Enable unrestricted media sharing, in the host properties.
- B. Configure the storage unit selection: Spanning.
- C. Allow backups to span disks, in the host properties.
- D. Ensure each basic disk storage unit is configured on a separate media server.

Correct Answer: C

Configure Allow backups to span disks in the media server host properties. Ensure that all the basic disk storage unit is configured on the same media server.
