QUESTION 1

An administrator is using Simplified Disaster Recovery to perform a full recovery of a Backup Exec server including the volume that contains the deduplication storage folder.

Which two conditions will exist after the recovery is performed? (Choose two.)

- A. All backup sets sent to the deduplication storage folder after it was backed up will be restored.
- B. Any existing backup sets sent to the deduplication storage folder after it was backed up are unavailable.
- C. The Backup Exec server will be fully functional, including all media devices.
- D. The deduplication storage folder logon account will need to be reset.
- E. The deduplication storage folder will need to be restored via Shadow Copy Components.

Correct Answer: BE

QUESTION 2

What is required in order to perform a Simplified Disaster Recovery (SDR) of a system from a deduplicated backup set?

- A. The deduplicated data must be staged to the local server before recovery.
- B. The deduplication storage folder must be locally attached to the target server.
- C. The deduplication storage folder must be taken offline to prevent backups from running during the restore operation.
- D. The target server must connect to a Backup Exec Server with the deduplication storage.

Correct Answer: D

QUESTION 3

Which two vSphere permission levels are required for successful backup of a VMware virtual machine without Granular Recovery Technology (GRT)? (Choose two.)

- A. Virtual machine > Provisioning > Allow read-only disk access
- B. Virtual machine > Interaction > Power Off
- C. Virtual machine > Inventory > Register
- D. Virtual machine > State > Create snapshot
- E. Virtual machine > Interaction > Power On

Correct Answer: AD

QUESTION 4

When should an administrator disable the option Request all media in the sequence for catalog operations within the Backup Exec settings?

- A. when cataloging deduplication storage folders
- B. when media is missing within spanned backup sets
- C. when cataloging incremental backups only
- D. to free disk space by purging catalogs from disk

Correct Answer: B

QUESTION 5

An administrator has a backup job that protects three SQL instances on the server. The third instance hosts a very important application database, so the administrator wants to ensure that instance is the first one backed up.

What is the most efficient way to ensure the application database instance is the first to be backed up?

- A. drag the application database instance to the top of the backup selections tree
- B. create a new backup job that backs up only the application database instance, and run that backup job first
- C. use the reordering controls on the Selection Details page to make the application database instance the first one selected
- D. select the specific SQL instance in the backup selection list and use the Tag as business-critical option

Correct Answer: C
