QUESTION 1

What is the lowest interval you can schedule a backup job to run at?

- A. Continuously
- B. Daily
- C. Every minute
- D. Hourly
- E. Every 5 minutes

Correct Answer: B

QUESTION 2

Which previous versions are supported when upgrading directly to Veeam Backup and Replication version 7? (select three)

- A. 6.5
- B. 6.0
- C. 6.1
- D. 6.2
- E. 5.0

Correct Answer: ABE

QUESTION 3

15 VMs are running on a Hyper-V platform and five physical servers at a remote office (ROBO). The administrator has been tasked with setting up centralized off-site backups at the headquarters (HQ). The available bandwidth is 50 Mbps. RPO is set to six hours and the data generated for the interval is 500 GB. WAN accelerators can be added if necessary. Which of the following will achieve the RPO?

- A. Use backup copy jobs in with High-Performance Mode enabled. Set the schedule to run every six hours.
- B. Use backup copy jobs with copy mode set to "immediate copy". Use WAN acceleration.
- C. Use backup copy jobs with copy mode set to "periodic copy" and copy every six hours.
- D. Configure the backup copy jobs with traffic throttling to 30 Mbps to limit the impact. Enable WAN acceleration.

Correct Answer: B

Explanation: According to the Veeam Backup and Replication user guide¹², WAN acceleration is a technology that

optimizes data transfer to remote locations by performing deduplication and caching. It is specific for off-site backup copy jobs and replication jobs¹². Therefore, if you want to achieve the RPO of six hours with 500 GB of data and 50 Mbps of bandwidth, you should use backup copy jobs with WAN acceleration enabled. This will reduce the amount of data that needs to be transferred over the network and speed up the backup process¹². The simplest configuration would be an immediate copy mode with WAN acceleration

QUESTION 4

Which of the following is the function of the guest integration proxy component?

- A. Deploys a Veeam persistent agent on every Windows VM to be processed
- B. Mounts the VM file system for browsing purposes when performing a restore to remote site
- C. Deploys a temporary runtime coordination process on every Windows VM to be processed
- D. Processes VM data, taking the load off the Veeam backup server

Correct Answer: C

QUESTION 5

In order to delete a backup repository from the Veeam Backup and Replication UI, you must ensure that:

- A. At least one successful Configuration Backup has been made.
- B. None of the jobs are running at the moment.
- C. None of the jobs, including the Configuration Backup job, are targeting it.
- D. All of the backup files are removed from this repository.

Correct Answer: C
