### QUESTION 3

Which of the following are among the requirements for an off-host backup proxy server? (Choose four.)

- A. The Hyper-V Role must be installed
- B. The hardware VSS provider must be configured
- C. Veeam Backup from Storage Snapshot must be enabled
- D. The proxy server must access the shared storage where the VM's reside

- E. The version of the Hyper-V host and the off-host backup proxy must match
- F. Hyper-V must be Windows 2012 or Windows 2012 R2

Correct Answer: ABDF

---

#### QUESTION 4

What effect will changing the compressing settings for a backup job have?

- A. New compression settings are applied at the next run of the job. Previously created backup files are not affected.
- B. New compression settings are not applied until an active full backup has been performed. Previously created backup files are re-processed.
- C. New compression settings are applied at the next run of the job. Previously created backup files are re- processed.
- D. It is not possible to change compression level after first backup has been run.
- E. New compression settings are not applied until an active full backup has been performed. Previously created backup files are not affected.

Correct Answer: E

---

#### QUESTION 5

Which of the following statements is true when a Virtual Lab is deployed without configuring a Proxy Appliance?

- A. Routing requests from the Virtual Lab are sent directly to the production environment
- B. Virtual machines started in the Virtual Lab cannot be accessed through the network
- C. Manual recovery verification cannot be performed
- D. Only virtual machine replicas can be verified

Correct Answer: A
