QUESTION 1

You are the Office 365 administrator for your company.

Users report that they cannot sign in to Skype for Business from their mobile devices, but they are able to send and receive Skype for Business messages by using their laptop computers.

You need to troubleshoot the issue. What should you do?

A. From the Office 365 message center, confirm Skype for Business settings.

B. Use the Microsoft Connectivity Analyzer tool to confirm settings.

C. Confirm Skype for Business user licenses for the affected users.

D. From the Skype for Business admin center, verify the external access settings.

Correct Answer: B

The Microsoft Connectivity Analyzer (MCA) tool is a companion to the Microsoft Remote Connectivity Analyzer web site. The MCA tool provides administrators and end users with the ability to run connectivity diagnostics for five common

connectivity symptoms directly from their local computer.

One of the five symptoms that can be tested using MCA is:

"I can\\'t log on to Skype for Business on my mobile device or the Skype for Business Windows Store App" ?This test checks for the Domain Name Server (DNS) records for your on-premise domain to ensure they are configured correctly for

supporting Mobile Skype for Business clients. Also it connects to the Autodiscover web service and makes sure that the authentication, certificate, web service for Mobility is correctly set up.

QUESTION 2

Fabrikam, inc is a financial services organization.

Fabrikam recently purchased another financial services organization named Contoso, Ltd.

Fabrikam has 2000 users. Contoso has 500 users.

Windows 10 and office 2016 are deployed to all computers.

Physical Location:

Fabrikam has an office in the United States. Contoso has an office in the United Kingdom.

The offices connect to each other by using a WAN link. Each office also connects directly to the internet.

Existing Environment:Active Directory:

The network Fabrikam contains an Active Directory forest.

The Active Directory environment of Contoso was migrated to the Active Directory forest of Fabrikam. The forest contains three domains named fabrikam.com,contractor.fabrikam.com, and contoso.com.

All domain controllers run Windows Server 2008 R2.

All contractors outsourced by fabrikam use the user principal name (UPN) suffix of contractor.fabrikam.com. If fabrikam hires the contractor as a permanenet employee, the UPN suffix changes to fabrikam.com.

Network

The network has the following configurations:

*

External IP address for the United States office: 192.168.1.100outbound UDP 50000 to outbound UDP

*

External IP address for the United Kingdom office: 192.168.2.100

*

Internal IP address range for the United States office: 10.0.1.0/24

*

Internal IP address range for the United Kingdom office : 10.0.2.0/24

Active Directory Federation Services (ADFS)

AD FS and web Application Proxies are deployed to support an app for the sales department. The app is accessed from the Microsoft Azure Portal.

Office 365 Tenant

You have an Office 365 subscription that has the following configurations:

*

Organization name: Fabrikam Financial Services.

*

Vanity domain: Fabrikamfinancialservices.onmicrosoft.com

*

Microsoft SharePoint domain: Fabrikamfinancialservices .sharepoint.com

*

Additional domain added to the subscription: Contoso.com and fabrikam.com

Requirements:Planned Changes:

*

Deploy Azure AD connect.

*

Move mailboxes from Microsoft Exchange 2016 to Exchange Online.

*

Deploy Azure multi-factor authentication for devices that connect from untrusted networks only.

*

Customize the AD FS sign-in webpage to include the Fabrikam logo, a helpdesk phone number, and a sign=in description.

*

Once all of the Fabrikam users are replicated to Azure Active Directory (Azure AD), assign an E3 license to all of the users in the United States office.

Technical Requirements:

Contoso identifies the following technical requirements:

*

When a device connects from an untrusted network to https://outlook.office.com, ensure that users must type a verification code generated from a mobile app.

*

Ensure that all users can access office 365 services from a web browser by using either a UPN or their primary SMTP email address.

*

After Azure AD connect is deployed, change the UPN suffix if all the users in the Contoso sales department to fabrikam.com.

*

Ensure that administrator are notified when the health information of Exchange Online changes.

*

User Office 365 reports to review previous tasks performed in Office 365.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.

Solution: You add User1 to the SharePoint administrator admin role.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

The Service administrator admin role does not have the necessary privileges to create mailboxes in Exchange Online and sites in SharePoint Online. References: https://support.office.com/en-us/article/About-Office-365-admin-rolesda585eea-f576-4f55-a1e0-87090b6aaa9d

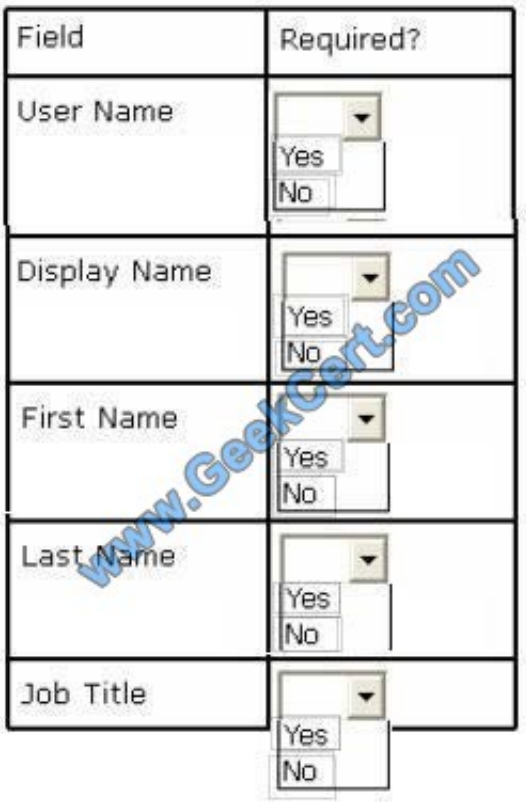
QUESTION 3

A company deploys an Office 365 tenant.

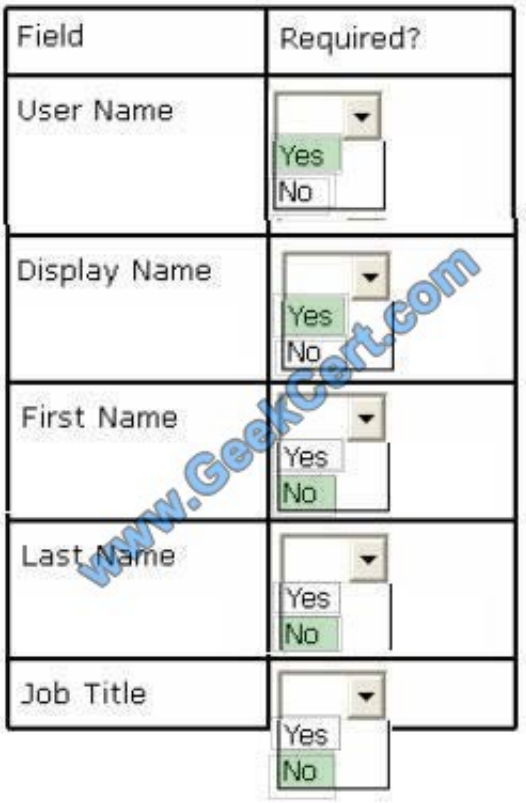
You prepare to use the bulk add tool to add users to Office 365. You need to prepare a file to use with the bulk add tool.

Which fields must you include in the file? To answer, drag the appropriate response to each field. Each response may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Hot Area:



Correct Answer:



QUESTION 4

You deploy Office 365.

All the members of a team named Sales have full access to a shared mailbox named Sales.

You enable auditing for all shared mailboxes.

From the Sales mailbox, an email message that contains inappropriate content is sent.

You need to identify which user sent the message.

What should you do?

A. From the Exchange Control Panel, run an administrator role group report.

B. From Windows PowerShell, run the Get-SharingPolicy cmdlet.

C. From Windows PowerShell, run the Write-AdminAuditLog cmdlet.

D. From Windows PowerShell, run the New-MailboxAuditLogSearch cmdlet.

Correct Answer: D

By process of elimination:

The Write-AdminAuditLog cmdlet will write a comment to the administrator audit log. The Get-SharingPolicy cmdlet allows you to view the settings of sharing policies The administrator role group report in EOP will list changes to the

management role groups within a particular time frame.

The New-MailboxAuditLogSearch cmdlet performs an async search of mailbox audit logs for the specified mailboxes and sends the search results by email to the specified recipients.

QUESTION 6

Yen are the Office 365 administrator for your company.

You must use Windows PowerShell to manage cloud identities in Office 365. You must use a computer that runs Windows 10 to perform the management tasks.

You need to ensure that the Windows 10 computer has the necessary software installed.

What should you install first?

A. Windows PowerShell 4.0

B. Azure Active Directory Rights Management Service

C. Microsoft Online Services Sign-in Assistant

D. Azure Identity Service

Correct Answer: A

QUESTION 7

Your company has an Office 365 subscription. The network contains an Active Directory domain. You configure single sign-on for all users. Corporate security policy states that all account passwords used by Windows services must be

changed every 90 days.

An administrator changes all of the account passwords used by Windows services.

You need to ensure that single sign-on continues to function.

What should you do?

A. From Windows PowerShell, run the Update-MSOLFederatedDomain cmdlet.

B. From Internet Information Services (IIS) Manager, modify the properties of the ADFS virtual directory.

C. From the Services console, modify the properties of the AD FS 2.0 Windows Service.

D. From Windows PowerShell, run the Set-MSOLADFSContext cmdlet.

Correct Answer: C

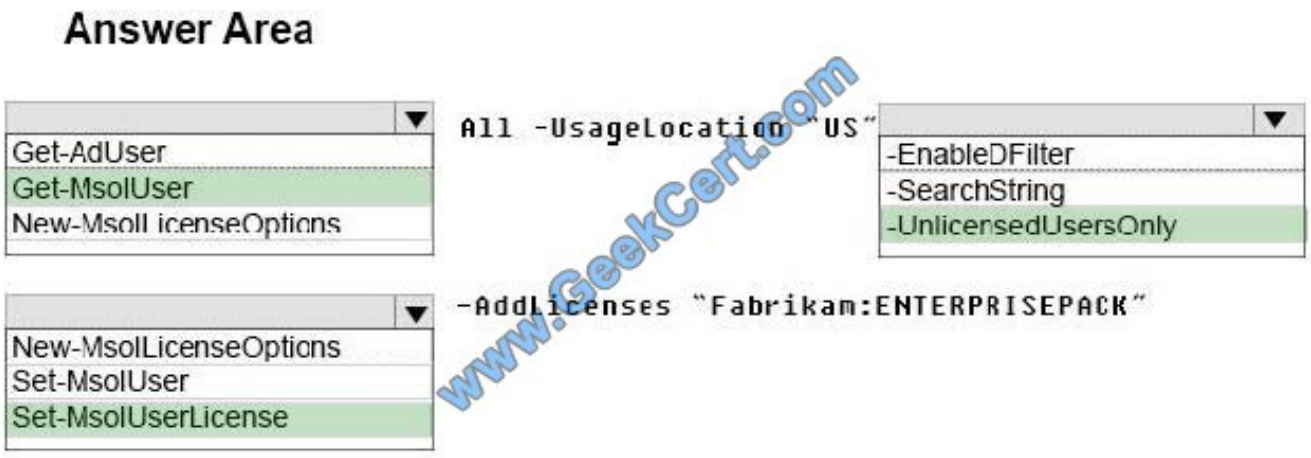
You synchronize all of the fabrikam.com users to Azure AD.

You need to implement the planned changes for the users in the United States office.

Which command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

Correct Answer:



The Get-MsolUser cmdlet gets an individual user or list of users from Azure Active Directory.

The –UnlicensedUsersOnly parameter indicates that only users who are not assigned a license are returned.

The Set-MsolUser cmdlet modifies a user object in Azure Active Directory.

QUESTION 9

Litware Inc. has an Office 365 Enterprise El plan. Employees have access to all Office 365 services.

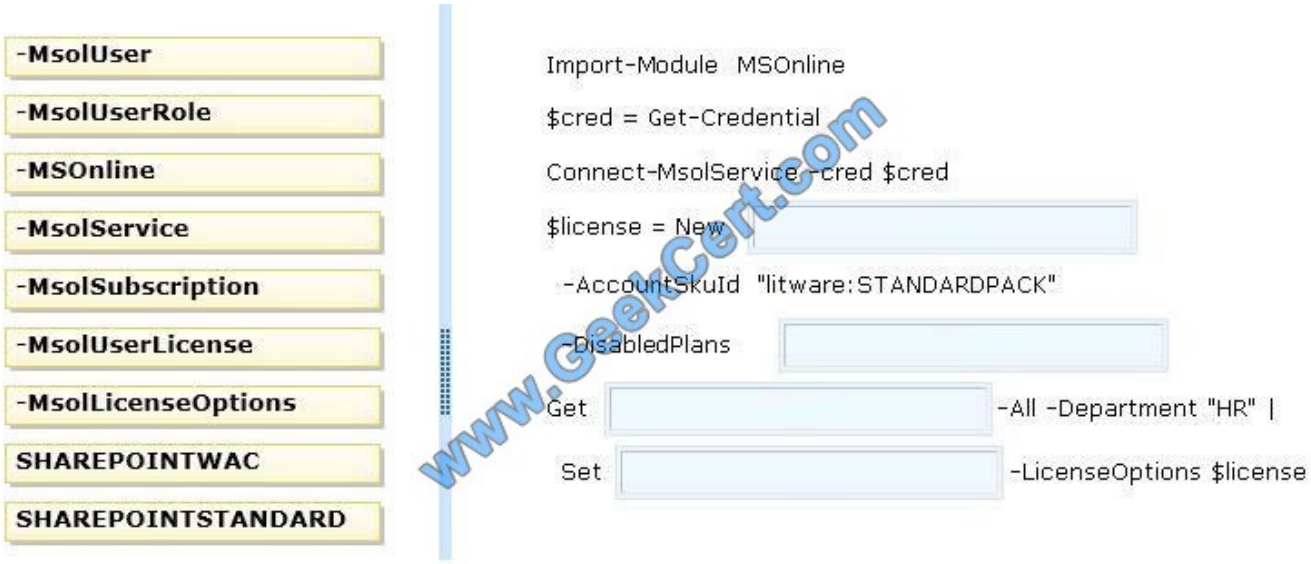
Employees in the human resources (HR) department must continue to use the on-premises SharePoint 2013 deployment due to legal requirements.

You need to disable access to SharePoint Online for all HR department employees.

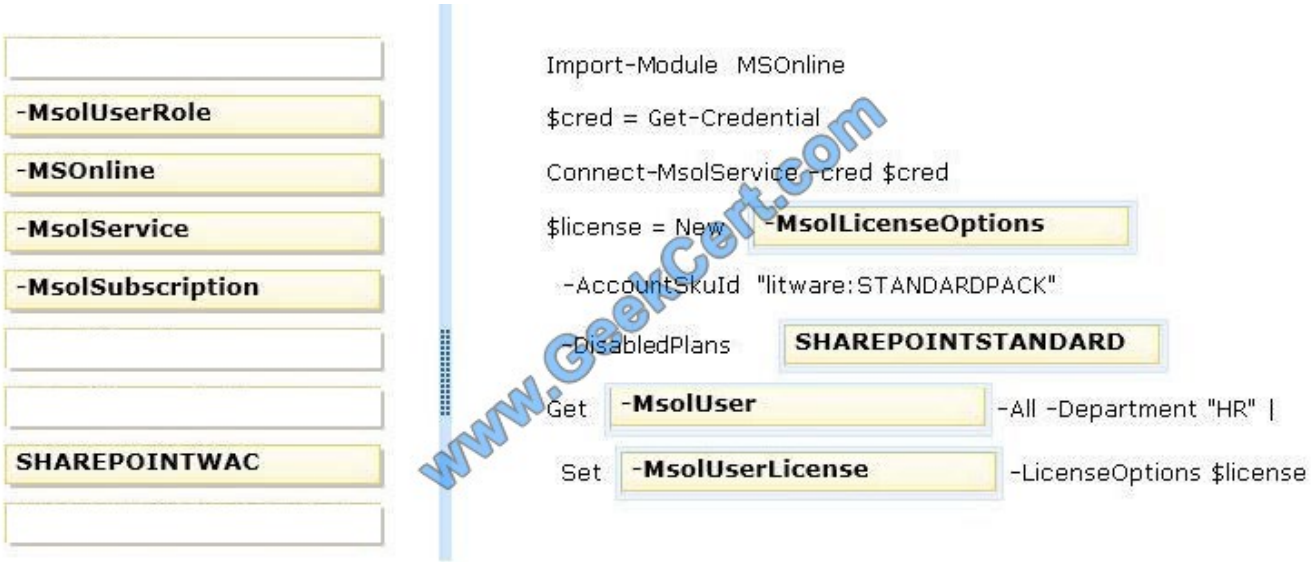
How should you complete the relevant Windows PowerShell commands? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations in the answer area. Each Windows PowerShell segment may be

used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:



Correct Answer:



QUESTION 10

You manage the Office 365 environment for Contoso Ltd. All employees use Microsoft Exchange Online for email.

All employees must use multi-factor authentication (MFA) to access email. You configure MFA for the Office 365 environment.

You need to configure MFA for all company employees.

What should you do? To answer, select the appropriate options in the dialog box in the answer area.

NOTE:Each correct selection is worth one point.

QUESTION 11

A company deploys an Office 365 tenant. You install the Active Directory Federation Services (AD FS) server role on a server that runs Windows Server 2012. You install and configure the Federation Service Proxy role service. Users sign in

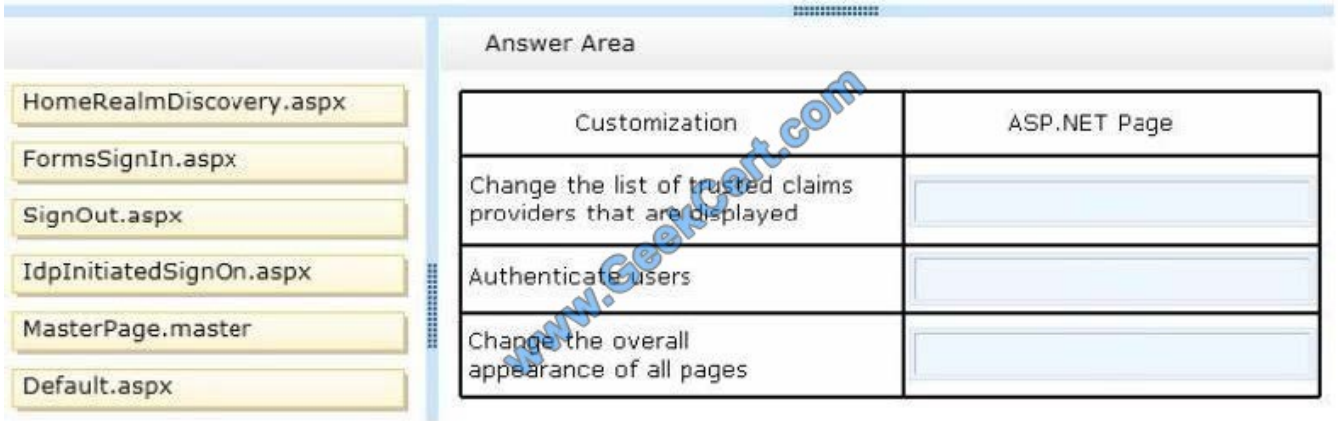
by using the Security Assertion Markup Language (SAML) protocol.

You need to customize the sign-in pages for Office 365.

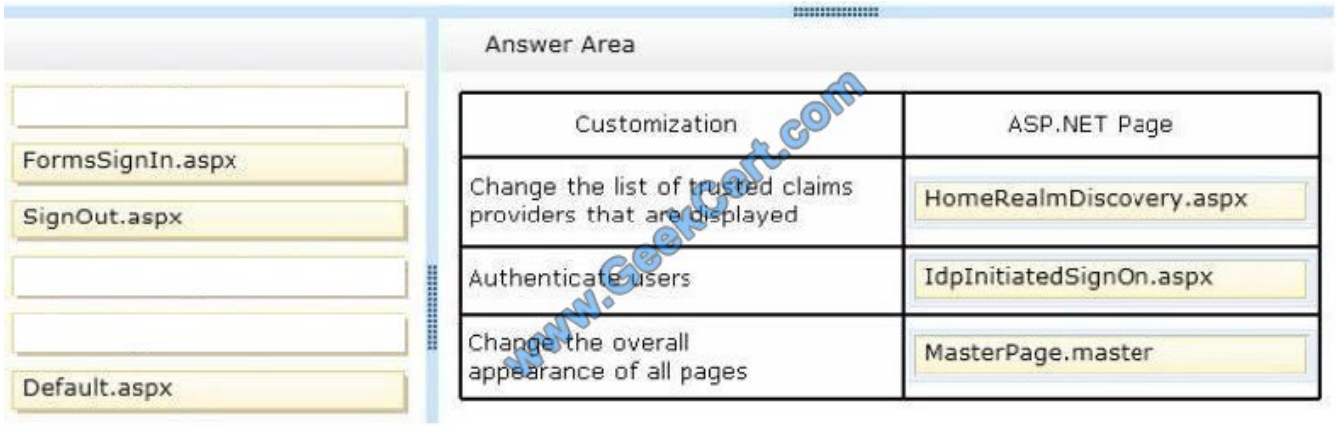
Which pages should you customize? To answer, drag the appropriate page to the correct customization.

Each page may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:



Correct Answer:



http://msdn.microsoft.com/en-us/library/ee895359.aspx

QUESTION 12

Your company has an Office 365 Small Business subscription.

You are the Microsoft SharePoint Online administrator.

The company wants to have two separate public websites with different URLs.

What should you do?

A. Upgrade to SharePoint Online for Office 365 Enterprise, Education, and Government.

B. Create one public website and one subsite, and then configure a redirect.

C. Create two public websites and configure the DNS records for each site.

D. Upgrade to SharePoint Online for Office 365 Midsize Business.

Correct Answer: B

References: http://www.toddklindt.com/blog/Lists/Posts/Post.aspx?ID=48

QUESTION 13

An organization with an Active Directory Domain Services (AD DS) domain migrates to Office 365. You need to manage Office 365 from a domain-joined Windows Server 2012 Core server.

Which three components should you install? Each answer presents part of the solution.

A. Azure Active Directory module for Windows PowerShell

B. Microsoft .NET Framework 3.5

C. Microsoft Office 365 Integration Module for Windows Small Business Server 2011 Essentials

D. Microsoft .NET Framework 4.0

E. Microsoft Online Services Sign-in Assistant

F. Rights Management module for Windows PowerShell

Correct Answer: ABE

You can use Windows PowerShell to administer Office 365 and Azure Active Directory. However, the default installation of Windows PowerShell on Windows Server 2012 (or any other version of Windows) does not include the PowerShell

cmdlets required to manage Office 365 or Azure Active Directory.

You need to install the PowerShell module that includes the necessary cmdlets for managing Azure Active Directory. This module is the Windows Azure Active Directory Module for Windows PowerShell module. This module also requires that

Microsoft .NET Framework 3.5 is installed and enabled.

Before the Windows Azure Active Directory Module for Windows PowerShell, can be installed, the Microsoft Online Services Sign-in Assistant must be installed. This will allow you to connect to your Office 365/Azure subscription from a

PowerShell session on a remote computer.

QUESTION 14

An organization migrates to Office 365.

The Office 365 administrator must be notified when Office 365 maintenance activities are planned.

You need to configure the administrator\\'s computer to receive the notifications.

What should you configure?

A. Office 365 Business Connectivity Service

B. Service requests

C. Service health page

D. Office 365 Service Health RSS Notifications feed

Correct Answer: D

You can log in to Office 365 as an Office 365 Administrator and view the Service Health Page to view the status of your Office 365 services. You can use the Service Health Page to view information on the status of your services for the current day or you can select the last 6 days or 30 days for a historical view.

In the top right corner of the Service Health page, there is an RSS icon. You can click on the RSS icon to sign up for the service health RSS feed, which will email you when a new event is added or an existing event is updated.

QUESTION 15

You use a centralized identity management system as a source of authority for user account information. You export a list of new user accounts to a file on a daily basis. Your company uses a local Active Directory for storing user accounts for

on-premises solutions.

You are also using Azure AD Connect.

New user accounts must be created in both the local Active Directory and Office 365. You must import user account data into Office 365 daily.

You need to import the new users.

What should you do?

A. Create a Windows PowerShell script to import account data from the file into Active Directory.

B. Create a Windows PowerShell script that uses the MSOnline module to import account data from the file.

C. Use the Azure Management Portal to import the file.

D. Use the Office 365 admin center to import the file.

Correct Answer: A

To force a full sync with the Azure AD Connect tool from Windows PowerShell run Import- Module ADSync followed by Start-ADSyncSyncCycle -PolicyType Initial

Note: The DirSync tool, which you can use to synchronize your on-premises Active Directory Domain Services (AD DS) with an instance of Azure Active Directory (AD), has been updated with the new Azure AD Connect tool. You typically use the DirSync or Azure AD Connect tools to configure either password synchronization or single sign-on so that your users can use their on-premises AD DS credentials to authenticate to Office 365. The new Azure AD Connect tool provides a richer feature set than the DirSync tool and is now the recommended tool to use.
